MONTHLY REVIEW
OF
CANADIAN FISHERIES STATISTICS
JANUARY 1950-51

(40)

January landings of sea-fish in Canada (apart from Newfoundland) amounted to 76,202,000 lb., an increase of 105.5 p.c. over the total for January, 1949. Total landed value, at \$2,211,000, was 44.5 p.c. higher than in the same month of last year.

On the Pacific Coast the Catch of 60,767,000 lb., was more than three times greater than that taken in January, 1949. The increase was caused by bigger landings of herring -- 60.0 as against 17.9 million pounds.

Atlantic Coast landings totalled 15,435,000 lb., a decrease of 12.1 p.c. from the catch in the same month a year ago. Even though there were bigger catches of lobsters, clams and quahaugs, haddock and other less important species, these increases were not enough to compensate for declines in sardines, smelts and cod. Their net effect on the landed value, however, was to raise it 23.3 p.c. above that for January, 1949.

During 1949 fishery products to the value of \$100.2 millions were exported, an apparent increase of 11.2 p.c. over the total for the previous year. However, it must be remembered that this figure contains approximately \$13.7 millions exported from Newfoundland since March 31, 1949. Therefore the comparable totals would be \$86.0 and \$89.8 millions for 1948 -- a decrease of 4.2 p.c. Shipments of canned fish were 20 p.c. lower, foreign sales of canned herring and sardines declining by \$5.6 and \$0.8 millions respectively. However, exports of canned salmon increased by some \$3.0 millions. In addition more fresh shellfish, meal and oil were shipped abroad. Salted and pickled fish showed small increases, without including Newfoundland figures, but the value of exports of fresh, frozen and smoked fish from the mainland was lower than in 1948 -- by amounts large enough, except in the case of fresh or frozen fillets, to offset the increases due to the inclusion of Newfoundland figures.

Stocks of all frozen fish in Canada (excluding Newfoundland) amounted to 31,741,000 lb., on February 1, 1950 of which 29,865,000 lb. were frozen fresh and 1,876,000 lb. frozen smoked. These holdings are lower by 337,000 lb. frozen fresh and lower by 206,000 lb. frozen smoked than those at February 1, 1949. Compared with January 1, 1950 figures they are lower by 7,129,000 lb. frozen fresh and lower by 388,000 lb. frozen smoked. There was an "out-of-storage" movement for all classifications of 7.5 million pounds as compared with a similar movement of 5.3 million pounds during January, 1949.

After dropping in November the index for wholesale fishery products rose during December. The figure for meat and poultry also rose, but that for all foods dropped. Once more the Canadian cost-of-living index declined fractionally.

LES EXPORTATIONS DES PECHERIES DIMINUENT EN 1949

En 1949, les exportations des produits et sous-produits de la pêche au Canada (y inclus Terre-Neuve) ont diminué de 12 pour cent en valeur par rapport à l'année précédente. Elles s'établirent à \$106.2 millions comparativement au chiffre record de \$120.4 millions en 1948. Une diminution des captures, un retard apporté à l'expédition de certains produits et la suppression des expéditions de secours à certains pays d'Europe ont causé ce déclin.

La comparaison avec 1948 est rendue plus difficile par l'entrée de Terre-Neuve dans la Confédération. Les exportations de cette province furent incluses aux statistiques canadiennes à partir du premier avril dernier. Le total obtenu pour 1949 est de \$100.2 millions, Terre-Neuve ayant contribué au chiffre canadien, pour les neuf derniers mois, par \$14.2 millions, selon les registres des ports de sortie de cette province. Ce dernier chiffre est pourtant un minimum car certains produits d'origine terre-neuvienne furent inscrits comme exportations à des ports de sortie canadiens en dehors de cette province. Cette remarque indique de façon générale que notre information par provinces ou par groupes de provinces, pour le sujet qui nous intéresse, est nécessairement limitée et elle trouve application dans les notes subséquentes.

Les exportations des produits et sous-produits canadiens de la pêche (à l'exclusion de Terre-Neuve) peuvent donc être estimées à \$86.0 millions en 1949 comparativement à \$89.8 millions pour l'année précédente, soit une baisse de 4 pour cent. Pour la côte du Pacifique elles se sont maintenues au même chiffre qu'en 1948, soit \$30.4 millions. Celles des poissons d'eau douce se sont légèrement accrues en passant de \$13.7 millions en 1948 à \$14.1 millions l'année dernière. Toutefois, pour les Provinces Maritimes et le Québec elles s'établirent à \$41.4 millions, soit \$4.3 millions de moins que l'année précédente. Pour Terre-Neuve, les expéditions des trois premiers mois furent de \$6.0 millions ce qui porte le total annuel de 1949 à \$20.2 millions comparativement à \$30.6 millions en 1948.

Les observations qui suivent, portant sur les différents groupes de produits, s'appliquent aux statistiques totales du Canada et de Terre-Neuve pour les deux dernières années.

Les exportations de poisson congelé sont passées de \$39.8 millions en 1948 à \$35.7 millions en 1949. Durant la première partie de l'année dernière, les Etats-Unis possédaient des stocks de poisson congelé qu'on a voulu réduire. Toutefois, les exportations de poissons d'eau douce ont substantiellement augmenté par rapport à l'année précédente et cela représente l'item majeur de ce groupe où on note un accroissement.

Pour le poisson traité, les exportations furent de \$28.1 millions en 1949, soit une diminution de \$8.8 millions relativement à 1948. Les expéditions de poisson salé et séché des Provinces Maritimes et du Québec furent supérieures à celle de l'année précédente, de même que celles de hareng salé à sec de la Côte du Pacifique, mais celles du poisson salé et séché de Terre-Neuve ont subi une forte diminution; les stocks de poisson salé terre-neuvien étaient bas durant le premier semestre de 1949 et les marchés du sud de l'Europe ont présenté des difficultés particulières au cours du deuxième semestre. Les ventes de poisson saumuré furent à peu près égales à celles de l'année précédente, étant augmentées pour Québec et les Maritimes, mais diminuées de beaucoup pour Terre-Neuve.

Les exportations de poisson en conserve sont passées de \$18.7 millions en 1948 à \$15.0 millions en 1949. Celles de la Côte du Pacifique, atteignirent pourtant \$11.9 millions, une augmentation de \$2.0 millions comparativement à l'année précédente, grâce au financement obtenu de l'Administration de Coopération Economique. Les ventes de hareng en conserve, "chicken haddie" etc, ont diminué considérablement à cause de la suppression des expéditions de secours. Les expéditions de sardines en conserve ont diminué d'un million de dollars en raison de la diminution des captures.

Les exportations de mollusques et crustacés évaluées à \$13.5 millions en 1949, représentèrent une augmentation de \$0.3 million par rapport à l'année précédente, bien que les ventes de Terre-Neuve aient été diminuées.

Les huiles sont passées de \$6.8 millions en 1948 à \$6.2 millions l'année dernière. Ce résultat est pourtant satisfaisant, étant donnée la chute des prix encourue au cours de l'année. Les farines de poisson, écailles de poisson et les autres produits atteignirent \$7.8 millions, une augmentation de \$2.7 millions par rapport à l'année précédente. Cela prouve que les possibilités de mettre sur le marché les sous-produits de la pêche vont grandissantes.

MONTHLY REVIEW
OF
CANADIAN FISHERIES STATISTICS
FEBRUARY 1950

The February landings of sea-fish in Canada (Newfoundland NOT included) amounted to 121,942,000 lb., a decrease of 6.6 p.c. from the total for the same month of last year. However, the total landed value -- \$2,352,000 -- was approximately the same as for February, 1949.

On the Atlantic Coast the catch totalled 13,503,000 lb., an increase of 4.1 p.c. over that taken in February, 1949. There were declines in the sardine, cod and smelt landings, but these were outweighed by gains in the other fisheries. The value of the catch increased by 43.1 p.c., largely because of bigger landings of the more valuable species such as lobster and haddock, and also because of the better prices paid for these and other species, such as smelts and halibut.

Landings on the Pacific Coast amounted to 108,439,000 lb., 7.8 p.c. below the unusually large catch made in the same month of last year.

To date, landings and landed values (11,194,000 lb. - \$1,004,196) in the winter fisheries of Manitoba are higher this year than last. Figures for individual species reveal marked changes. Catches of sauger, lake trout and whitefish are much greater; those of pike, perch and pickerel much lower.

Stocks of all frozen fish in Canada (apart from Newfoundland) amounted to 25,236,000 lb. on March 1, 1950, of which 23,682,000 lb. were frozen fresh and 1,554,000 lb. frozen smoked. These holdings are lower by 3,369,000 lb. frozen fresh and by 124,000 lb. frozen smoked than those at March 1, 1949. Compared with February 1, 1950 figures they are lower by 6,330,000 lb. frozen fresh and by 328,000 lb. frozen smoked. There was an "out-of-storage" movement for all classifications of 6.7 million pounds as compared with a similar movement of 3.6 million pounds during February, 1949.

Total value of fish and fishery products exported during January was \$8.2 millions, only 1.5 p.c. below the figure for January of last year. 1950 and 1949 figures are presented on a comparable basis by adding to the latter the value of exports from Newfoundland in January 1949 (excluding exports to Canada) and by deducting from the January, 1949, total the value of exports from Canada to Newfoundland.

LES IMPORTATIONS DES PRODUITS DE LA PÊCHE ONT LÉGEREMENT DIMINUÉ EN 1949 (1)

Les importations canadiennes des produits de la pêche en 1949 ont été de \$6.2 millions, ce qui représente une diminution de \$0.5 millions par rapport à l'année précédente. Nos achats d'huile de baleine et de spermaceti ont substantiellement décréu et cette diminution n'a pas été contre-balancée par un accroissement pour les mollusques, les crustacés et le poisson frais.

L'analyse de nos importations et la comparaison avec l'année précédente est rendue plus difficile par l'entrée de Terre-Neuve dans la Confédération. D'après les registres des ports de douane, le total des importations canadiennes fut de \$6.7 millions en 1949 comparativement à \$11.8 millions l'année précédente. Le chiffre de 1948 comprend nos achats faits à Terre-Neuve au cours de l'année entière tandis que celui de 1949 ne comprend la valeur de nos importations de telle provenance que durant les trois premiers mois de l'année - les transactions ayant par la suite la nature d'un simple échange inter-provincial. La comparaison des deux dernières années est rendue significative en éliminant nos importations en provenance de Terre-Neuve pour 1948 et durant les trois premiers mois de 1949. Par ailleurs, les importations des produits de la pêche à Terre-Neuve ont été négligeables au cours des dernières années. Le procédé consiste donc à comparer nos importations en provenance de tout pays autre que Terre-Neuve pour les deux dernières années. De la sorte, nous obtenons les chiffres mentionnés au début du présent article et s'appliquant au Canada dans son ensemble actuel. Les observations qui suivent sont faites sur cette base également.

Nos importations de poisson frais ou congelé furent de \$0.77 million en 1949, soit trois fois celles de l'année précédente, en raison d'entrées accrues de saumon frais de l'Alaska, de flétan et d'autres espèces des Etats-Unis. Nos achats de poisson traité furent de \$0.31 million, ce qui représente un léger accroissement spécialement pour le hareng saumuré - par rapport à l'année précédente. Les entrées de poisson en conserve sont passées de \$1.19 millions en 1948 à \$1.04 millions en 1949, la diminution affectant les sardines, les anchois et le thon en conserve.

Les restrictions à l'importation des certains mollusques et crustacés en provenance des Etats-Unis ont été levées en janvier 1949 et en conséquence nos achats sont passés de \$0.27 million en 1948 à \$1.81 million l'année suivante pour ce groupe de produits. Nos importations de crabes, crevettes etc. en conserve ont atteint plus d'un million alors qu'elles étaient inexistantes l'année précédente.

En raison d'approvisionnements généralement abondants en huiles, nos achats d'huiles marines ont substantiellement décréu. Ils furent de \$0.70 million en 1949 comparativement à \$3.44 millions l'année précédente. Nos importations d'huile de foies de morue et d'huile concentrées furent à peu près au niveau de 1948, mais celles d'huile de baleine et de spermaceti d'origine européenne diminuèrent de 90 pour cent en passant de \$2.94 millions à \$0.27 million.

Nos importations des autres produits de la pêche furent légèrement supérieures en passant de \$1.32 million à \$1.40 million. Il y eut augmentation dans les entrées de foies de poisson et diminution dans celle de l'iode brute. Les autres items tels les éponges, les coquillages, la farine de poisson ... présentèrent peu de changements, bien qu'il y ait une tendance générale à accroître l'emploi de ces sous-produits de la pêche.

Les Etats-Unis ont fourni les deux tiers de nos importations en 1949 comparativement à un tiers l'année précédente. En 1948, nos importations en provenance de ce pays furent de \$2.1 millions; elles atteignèrent \$4.0 en 1949, à cause principalement de la levée des restrictions sur les importations des huîtres, des crevettes en conserve etc. En plus, nos achats en provenance de l'Alaska s'accrurent de \$0.06 million à \$0.4 million.

D'autre part, les expéditions du Royaume-Uni firent une chute de \$3.0 millions à \$0.3 million, la diminution s'appliquant principalement à l'huile de baleine. Nos achats des colonies du Royaume-Uni (principalement Hong Kong) se sont légèrement accrues. L'Union Sud-Africaine nous a fourni pour la première fois des langoustes en conserve pour une valeur de \$38,000. Par contre, nos achats d'huiles concentrées de Nouvelle-Zélande ont été supprimés.

Nos achats des pays faisant partie du Plan de Rétablissement Européen sont passés de \$1.06 million à \$1.03, soit une légère diminution. Nos importations de Norvège, notre fournisseur européen le plus important, ont diminué de \$0.82 million à \$0.76 million tout comme celles en provenance de Portugal, en raison d'entrées moins importantes chez nous de sardines, anchois, etc. en conserve. Nos achats de hareng saumuré en provenance des Pays-Bas s'accrurent de \$58,000 à \$81,000. Les autres pays tels l'Italie, la Suède, la France, l'Islande, le Danemark, le Maroc et autres accrurent leurs ventes chez nous bien qu'elles n'atteignirent pas une grande valeur.

Nos fournisseurs d'Amérique Latine les plus importants sont le Pérou et le Chili. Toutefois nos achats de thon en conserve et d'iode brute ont diminué en 1949, de sorte que nos importations totales de l'Amérique Latine ont subi un léger déclin (de \$0.27 million à \$0.15 million).

Le seul autre pays fournisseur d'importance est le Japon qui a augmenté ses expéditions chez nous de \$22,000 en 1948 à \$80,000 en 1949.

MONTHLY REVIEW OF CANADIAN FISHERIES STATISTICS MARCH 1950

The March landings of sea-fish in Canada (Newfoundland NOT included) amounted to 23,456,000 lb., a decrease of 1.5 p.c. from the figure for the corresponding month of last year. The total landed value -- \$1,142,000 -- was 6.2 p.c. below that for March, 1949.

The Pacific Coast catch amounted to 4,527,000 lb., 34.9 p.c. below the total for the same month of last year. Again lower landings of herring were responsible for this decline.

Atlantic Coast landings totalled 18,929,000 lb., 12.3 p.c. higher than the catch in March of last year. Almost all species were taken in greater quantities, the exceptions being sardines -- none of which have been reported as landed in New Brunswick -- lobsters, oysters, rosefish and catfish. The total value of the catch declined by 7.7 p.c. This was due to the lower landings of lobsters, the most valuable species.

Landings of wet-salted fish during March amounted to 36,359 lb., consisting of cod--12,967 lb., and hake--23,392 lb.

To date, landings and landed values (886,000 lb. - \$197,035) in the Ontario fisheries are below the 1949 level. However, prices for most species -- especially the more valuable, such as whitefish -- are higher this season, so that although the total quantity landed is 39.2 p.c. less, the total landed value is only 9.8 p.c. less than for the same period of last year.

Stocks of frozen fish in Canada, including Newfoundland, amounted to 19,933,000 lb. on 1 April, 1950, of which 18,371,000 lb. were fresh and 1,562,000 lb. smoked. The total is 7,465,000 lb. lower than that at 1 March, 1950; as compared with the figures at 1 April, 1949, the totals for Canada excluding Newfoundland are lower by 5,772,000 lb. frozen fresh and 257,000 lb. frozen smoked.

Fish and fishery products exported during the first two months of this year were valued at \$15.9 millions, 2.5 p.c. below the total for the same period of 1949. Sales of fresh and frozen, of smoked fish and of molluscs and crustaceans were greater, while those of all other categories declined.

MANITOBA

Fishing operations were discontinued on most of the lakes early in March. The season was extended for several lakes in the far North, but reports from these outlying points have not yet been received. The summer commercial fishing season will open in June.

LA PECHE AU COURS DU PREMIER TRIMESTRE DE 1950 (1)

La pêche a procuré un rendement satisfaisant au cours du premier trimestre de 1950. Les captures sur la côte de l'Atlantique - à l'exclusion de Terre-Neuve - et en Colombie Britannique ont atteint 221.5 millions de livres contre 191.4 millions durant la même période de l'année précédente. La valeur s'est également accrue et a atteint \$5.7 millions. Les espèces les plus importantes capturées furent le hareng, pour la côte du Pacifique et les poissons de fonds pour la côte de l'Est. La pêche d'hiver en eau douce a également procuré un rendement supérieur à celui de l'année précédente.

Sur la côte de l'Atlantique - à l'exclusion de Terre-Neuve - les captures de poisson ont atteint 47.9 millions de livres au cours des trois premiers mois de 1950, avec une valeur au pêcheur de \$3.3 millions. Ces résultats dépassent légèrement ceux de 1949 pour la même période. Les prises de la morue et de ses apparentées ont été particulièrement élevées ainsi que celles du flétan. Par contre la pêche à la "sardine" n'a pas encore donné de résultats tangibles et celle du homard, bien que satisfaisante dans son ensemble, a fourni un rendement inférieur au cours du dernier mois.

La pêche à l'éperlan mérite une mention spéciale, étant une pêche d'hiver. Elle se poursuit sur la côte de l'Est de septembre à février, les captures les plus importantes étant généralement faites en décembre et janvier. La saison permise a été légèrement allongée au cours de février dernier mais dans l'ensemble les captures n'ont pas atteint le niveau de l'année précédente. Elles totalisèrent à 5.7 millions de livres, contre 7.4 millions pour la saison 1948-49. Toutefois, les prix ont été légèrement supérieurs au cours de la dernière saison, la moyenne étant de 13.5¢ la livre contre 11.2¢ pour la saison précédente.

Les captures de poisson en Colombie Britannique atteignent 173.7 millions de livres au cours des trois premiers mois de 1950, ayant une valeur au pêcheur de \$2.4 millions. En quantité et en valeur, cela représente une augmentation par rapport à la période correspondante de 1949. L'accroissement est attribuable surtout à la pêche au hareng qui fut particulièrement importante au cours des deux premiers mois de l'année.

Pour l'ensemble de la saison pourtant - octobre à février - le rendement de la pêche au hareng a été légèrement inférieur à celui de 1948-49. Près de 183,000 tonnes de poisson ont été débarquées au cours de la dernière saison, soit une diminution d'à peu près 6,000 tonnes par rapport à la saison 1948-49. Les résultats de la dernière saison furent pourtant très satisfaisants. Les principaux produits obtenus du hareng se comparent comme suit à ceux de l'année antérieure;

<u>Produit:</u>	<u>Saison 1948-49</u>	<u>Saison 1949-50</u>
Salé à sec (tonnes)	360	3,285
Farine (tonnes)	31,606	30,679
Huile (gallons imp.)	2,568,000	3,305,500
En conserve (caisses, 48 lb.)	92,815	75,862

Les exportations des produits et sous produits de la pêche, en janvier et février totalisèrent à \$15.9 millions, soit une valeur à peu près équivalente à celle de la même période en 1949. Les ventes de farine de poisson et d'huile ont diminué en valeur de \$0.7 million, mais par contre les envois de poisson congelé et de homard dépassent ceux des deux premiers mois de 1949.

Les stocks de poisson frais-congelé sont généralement bas au début d'avril. Il faut particulièrement signaler une diminution de 5.8 millions de livres par rapport à l'année dernière dans le cas du poisson d'eau douce. Les stocks de poisson fumé-congelé sont aussi réduits comparativement à 1949. Pour le produit salé - morue et ses apparentées - les stocks pour les Maritimes et le Québec, bien que supérieurs à ceux de l'année dernière sont à un niveau à peu près normal. La diminution par rapport au mois précédent indique des ventes à un rythme qui ne laisse prévoir aucun surplus quand la production de l'année courante sera disponible pour la mise sur le marché. Il en va de même du poisson saumuré; les stocks un peu élevés de maquereau de printemps seront facilement liquidés avant la mise sur le marché de la production de 1950. Pour Terre-Neuve, il convient de noter que les stocks de morue salée sont encore considérablement élevés.

MONTHLY REVIEW
OF
CANADIAN FISHERIES STATISTICS
APRIL 1950

In April landings of sea-fish in CANADA (Newfoundland not included) amounted to 30,849,000 lb., a decrease of 5.6 p.c. as compared with the figure for April, 1949. However, the landed value of the catch -- \$2,129,000 -- was 2.8 p.c. higher.

On the ATLANTIC COAST the catch totalled 26,537,000 lb., 10.5 p.c. lower than in April of last year. Of the major species cod, pollock, halibut, and clams and quahaugs were landed in greater quantities, but these gains were not enough to offset decreases in other categories. However, the total value of the catch was fractionally higher -- \$1,895,000 as against \$1,856,000 -- and a more successful halibut fishery was the main contributor to this increase.

Landings on the PACIFIC COAST at 4,312,000 lb., were 40.7 p.c. higher than in the same month of 1949, but again the landed value was higher -- \$234,000 compared to \$215,000. Species showing the biggest increases were soles and clams.

No new trends are apparent in the intended disposition of the catch on either coast.

Stocks of all frozen fish in Canada amounted to 18,587,000 lb., on May 1, 1950 of which 16,739,000 lb., were frozen fresh and 1,848,000 lb., frozen smoked. These holdings are lower by 6,869,000 lb., frozen fresh and lower by 431,000 lb., frozen smoked than those at May 1, 1949. Compared with April 1, 1950 figures they are lower by 1,648,000 lb., frozen fresh and higher by 284,000 lb., frozen smoked. There was an "out-of-storage" movement for all classification of 1.4 million pounds as compared with a similar movement of 1.0 million pounds during April 1949.

During the first quarter of the year fish and fishery products to the value of \$24.43 millions were exported, less than 1 p.c. lower than the amount for the like period of 1949. Gains were registered in all classes except those of pickled fish, canned fish and miscellaneous products. In the latter category exports of meal and oils were sharply reduced.

The wholesale price index number for fishery products was slightly lower in March, whereas those for meat and poultry and all foods were higher.

HERRING - PACIFIC

LA PECHE PROGRESSE A UN RYTHME SATISFAISANT (1)

Les mises à terre pour les pêcheries maritimes canadiennes (à l'exclusion de Terre-Neuve), furent de 30.8 millions de livres au cours du mois d'avril dernier, soit une diminution de près de deux millions de livres par rapport au même mois de l'année dernière. Toutefois, en avril, la valeur au pêcheur se maintient, dans l'ensemble, à un niveau équivalent à celui de l'année précédente.

Sur la côte de l'ouest, les activités de pêche ne sont pas très intenses au cours de ce mois. Toutefois, les prises, atteignant 4.3 millions de livres pour le mois, furent supérieures par 1.3 millions de livres à celles d'avril 1949. Il convient de signaler particulièrement une augmentation, par rapport au même mois de l'année précédente, dans les mises à terre de soles et de clams. Sur la côte de l'Atlantique, les captures de hareng et de sardines se maintiennent toujours à un niveau fort inférieur tandis que celles de poissons de fonds sont généralement supérieures à celles de l'année précédente. Pour un deuxième mois consécutif, les prises de homard furent, en avril, plus basses qu'en 1949.

Dans l'ensemble des quatre premiers mois de l'année, nos pêcheries maritimes se maintiennent à un niveau supérieur à celui de 1949 pour le rendement en quantité (mises à terre) et en valeur. L'accroissement des prises de poissons de fonds, en Nouvelle-Ecosse, a procuré une augmentation d'un demi million de dollars pour cette province par rapport à la même période de l'année dernière. La valeur des pêcheries de la côte du Pacifique sont également accrue de \$200,000 par rapport à 1949, en raison principalement des captures importantes de hareng en janvier et février.

Au premier mai, les stocks de poisson de mer congelé sont inférieurs d'un million et demie de livres à ceux de l'année dernière, la diminution s'appliquant principalement au hareng de la côte de l'Atlantique et du Pacifique. Les inventaires de poissons d'eau douce sont de 16.7 millions de livres contre 23.6 millions de livres à la même date de 1949. Ceux du poisson salé et saumuré, pour les Maritimes et le Québec, quoique supérieurs à ceux de l'année dernière, sont généralement bas; pour Terre-Neuve, par contre, les stocks de morue salée sont encore élevés.

Les exportations des produits et sous produits de la pêche pour les trois premiers mois de 1950 se maintiennent, en général, à un niveau équivalent à celui de 1949. Les exportations de poisson frais et congelé, de poisson fumé ou salé, de mollusques et crustacés se sont accrues, tandis que celles du poisson en saumure et en conserves ont diminué. Une diminution importante des exportations de farines et d'huile de poisson doit également être signalée.

L'indice du prix de gros des produits et sous-produits de la pêche est passé de 250.2 en février à 248.7 en mars, tandis que celui de la viande et de la volaille et celui des aliments en général s'augmentent. Au 15 avril, le prix payé au pêcheur pour la morue à Halifax avait diminué comparativement à 1949 mais par contre celui de l'aiglefin était d'une demie cent supérieur la livre. Les rapports sur le prix du flétan et du homard montrent un accroissement substantiel par rapport à l'année précédente.

MONTHLY REVIEW OF CANADIAN FISHERIES STATISTICS MAY 1950

During May landings in the sea-fisheries of CANADA (Newfoundland not included) amounted to 147,035,000 lb. with a value of \$8,273,000. As compared with May, 1949 these figures are higher by 15.9 and 26.6 p.c. respectively. The cumulative totals for the first five months of 1950 - 399,424,000 lb and \$16,093,000 -- are 13.8 and 17.9 p.c. greater than the totals for the like period of 1949.

The ATLANTIC COAST fisheries yielded 131,577,000 lb., an increase of 18.2 p.c. over the catch taken in the same month of last year. Almost all species were landed in bigger quantities, with herring, lobsters, cod and alewives leading the way. The value of the catch -- \$6,069,000 -- was higher by 36.6 p.c., and for this big increase a more than ordinarily successful lobster fishery was almost wholly responsible.

On the PACIFIC COAST landings totalled 15,458,000 lb., less than one per cent lower than in May, 1949. However, largely because of better halibut prices, the total landed value of the catch was 5.3 p.c. higher.

Landings and landed values in the ONTARIO fisheries continue at lower levels than obtained in 1949. Totals to date -- with corresponding 1949 figures in parentheses -- are 4,886,000 lb. (8,294,000 lb.) and \$945,917 (\$1,232,739).

Stocks of all frozen fish in CANADA (Newfoundland included) amounted to 31,680,000 lb. on June 1, 1950, of which 29,749,000 lb. were frozen fresh and 1,931,000 lb. frozen smoked. These holdings are lower by 9,571,000 lb. frozen fresh and lower by 648,000 lb. frozen smoked than those at June 1, 1949. Compared with May 1, 1950 figures they are higher by 13,009,000 lb. frozen fresh and higher by 87,000 lb. frozen smoked. There was an 'into-storage' movement for all classification of 13.1 million pounds as against a similar movement of 14.9 million pounds during May, 1949.

Exports of fish and fish products during the first four months of this year reached a value of \$31.8 millions, an increase of 5.3 p.c. over the total for the same period of last year. Shipments of pickled fish, canned fish and miscellaneous fish products continue lower, but these decreases are more than offset by increased exports in the other categories.

LES PRIX DU FLETAN EN COLOMBIE-BRITANNIQUE ATTEIGNENT UN NIVEAU RECORD (1)

Au cours du mois de mai, les captures de poisson de mer au Canada (à l'exclusion de Terre-Neuve) ont atteint 147.0 millions de livres avec une valeur au pêcheur de \$8.3 millions. C'était une augmentation de 15.9 pour cent pour les captures et de 26.6 pour cent pour la valeur, comparativement au même mois de l'année précédente. Les prises des cinq premiers mois atteignent près de 400 millions de livres évaluées, au pêcheur, à plus de \$16.0 millions, soit une augmentation de 13.7 et de 17.9 pour cent dans chaque cas, en comparaison avec la même période de 1949.

Les prises ont atteint 131.5 millions de livres, au cours de mai, dans les Provinces Maritimes et le Québec et ont rapporté aux pêcheurs plus de \$6.0 millions, contre 111.3 millions de livres et une valeur de \$4.4 millions en mai 1949. L'augmentation du rendement en mai 1950 affecte pratiquement toutes les espèces: il faut souligner l'accroissement des captures de homard, lesquelles s'étaient maintenues à un niveau inférieur au cours des deux mois précédents; Les mises à terre de poisson de fonds ont été abondantes; la pêche aux sardines, pratiquement nulle au cours des premiers mois, a procuré un rendement supérieur à celui de 1949 au cours de mai dernier. Les prix au pêcheur se sont maintenus à un niveau satisfaisant au cours des cinq premiers mois, plusieurs espèces enregistrant une augmentation.

La pêche au flétan sur la Côte du Pacifique s'est ouverte au premier mai. Les prises au cours du mois durent de 9.5 millions de livres et rapportèrent au pêcheur près de \$1.8 millions. Bien que la quantité soit inférieure à celle de 1949, la valeur, pour la même période en est accrue en raison du niveau record des prix obtenus durant la saison en cours. Ces derniers se sont accrus de 24 à 50 pour cent à Prince-Rupert - captures canadiennes - comparative-ment au même mois de l'année précédente, l'augmentation étant la plus sensible dans le cas du gros poisson. Les autres pêcheries de la Côte du Pacifique - bien que secondaires en importance à ce temps de l'année - ont fourni un rendement satisfaisant.

Les pêcheries en Ontario se maintiennent à date, à un niveau inférieur à celui de l'année précédente. Les captures totales pour l'année n'atteignent pas 5 millions de livres à la fin de mai, contre 8.3 millions à la même date de 1949. Toutefois, les exportations des poissons d'eau douce, en général, furent très satisfaisantes au cours des quatre premiers mois de l'année courante. Les ventes s'élèvent à 2.3 millions de livres évaluées à \$5.3 millions, contre 2.34 millions de livres et \$4.9 millions pour la même période de l'année précédente. Les exportations de corégone ont été particulièrement élevées au cours des premiers mois de cette année.

Les stocks de poisson de mer frais-congelé, au premier juin, sont inférieurs de 3.5 millions de livres à ceux de 1949: la diminution des inventaires de filets de haddock et du hareng sont particulièrement à signaler. Les stocks de poisson d'eau douce sont de 1.6 millions de livres, contre 7.6 millions à la même date de 1949. On se souviendra que l'année dernière la mise sur le marché du Tullibee, Doré, etc., a causé un problème majeur. Les inventaires de poisson salé et saumuré dans les Maritimes et le Québec sont relativement bas, mais une importante balance de la production de morue salée de 1949 à Terre-Neuve n'est pas même liquidée.

Les exportations des produits de la pêche en général procèdent à un pas légèrement supérieur à celui de l'année dernière. Les ventes aux Etats-Unis atteignaient \$20.8 millions à la fin d'avril contre \$18.2 million à la même date de 1949. Les exportations de poisson frais et congelé - dont les Etats-Unis sont le principal marché extérieur - se sont particulièrement accrues. Les ventes de morue salée furent légèrement supérieures à celles de l'année précédente. Les sous-produits de la pêche - huiles et farines - enregistrent cependant une substantielle diminution en volume et conséquemment en valeur par rapport à l'année précédente.

MONTHLY REVIEW OF CANADIAN FISHERIES STATISTICS JUNE 1950

June landings in the sea-fisheries of CANADA (not including NEWFOUNDLAND) amounted to 128,131,000 lb., with a landed value of \$7,985,000. These figures are higher by 6.9 and 26.5 p.c. respectively than those for the same month of last year. Inclusion of the reported value of supplementary landings raises the total for June, 1950, to \$8,205,353.

The month under review seems to have been a good one for fishermen on the PACIFIC COAST where landings -- 18,321,000 lb. -- were 60.6 p.c. and landed values -- \$3,095,000 -- 79.4 p.c. higher than the corresponding totals for June, 1949. All the major species showed increases with halibut and salmon the leaders. For the first half of this year landings and landed values were 21.6 and 26.9 p.c. higher respectively than for the same period of 1949.

On the ATLANTIC COAST the totals for June -- 109,810,000 lb. and \$4,890,000 -- were 1.3 and 6.6 p.c. higher than those for June, 1949. For the first six months the catch was 6.4 p.c. greater in volume and 17.8 p.c. higher in value than during the same period of last year. There has been a decline in the cod fishery, counteracted by big increases in landings and prices of other major species -- particularly lobsters and halibut.

In general the disposition of the catch on both coasts follows the trends established last year, with rather more emphasis on the production of frozen fillets of groundfish and flatfish.

Larger landings of the more valuable species such as blue pickerel, whitefish and lake trout were reported in June in the ONTARIO fisheries. Because of this the total value at the half-year was higher (\$1,657,464 - \$1,645,459) even though the catch itself was smaller (8,925,000 lb. - 10,748,000 lb.) than in the corresponding period of 1949.

Stocks of all frozen fish in CANADA amounted to 40,089,000 lb. on July 1, 1950 of which 37,382,000 lb. were frozen fresh and 2,707,000 lb. frozen smoked. These holdings are lower by 5,472,000 lb. frozen fresh and by 186,000 lb. frozen smoked than those at July 1, 1949. Compared with June 1, 1950 figures they are higher by 7,734,000 lb. frozen fresh and by 776,000 lb. frozen smoked. There was an "into-storage" movement for all classifications of 8.5 million pounds as compared with a similar movement of 3.5 million pounds during June, 1949.

During the first five months of this year the value of exports of fish and fish products -- \$39.3 millions -- was 4.7 p.c. higher than the total for the like period of 1949.

Prepared in the Fisheries Section
of the Industry and Merchandising Division.

JAN. FEB. MAR. APR. MAY JUNE JULY AUG. SEPT. OCT. NOV. DEC.

NOS PECHERIES FURENT TRES FRUCTUEUSES EN JUIN (1)

La pêche aux sardines et au homard a été très fructueuses dans les Provinces Maritimes et le Québec au cours de juin dernier. Les mises à terre de sardines furent de 12.7 millions de livres et celles du homard de 9.1 millions. C'était un deuxième mois consécutif de rendement très élevé pour ces deux espèces. Même si l'abondance a causé un fléchissement dans les prix, par rapport à l'année dernière, les pêcheurs n'en ont pas moins obtenu un revenu largement accru.

Les prises de flétan et de gasparot furent aussi très élevées pour le même mois. La morue est la seule espèce d'importance ayant subi une forte diminution par rapport à l'année précédente. Dans l'ensemble les captures de poissons, en juin, pour la côte de l'est - à l'exception de Terre-Neuve - atteignirent 109.8 millions de livres évaluées au pêcheur à \$4.9 millions soit une augmentation de 1.3% en valeur et de 6.6% dans le revenu.

La pêche au saumon s'est ouverte sous un heureux augure en Colombie-Britannique. Les captures pour le mois de juin furent supérieures à celles de 1949 avec des prix également accrus. Les mises à terre de flétan et de soles pour le mois dépassèrent également celles de juin 1949. Au total les prises atteignirent 18.3 millions de livres, évaluées à \$3.1 millions, soit une augmentation de 21.6 pour cent en volume et de 26.9 pour cent en valeur, comparativement à juin de l'année dernière.

L'utilisation du poisson brut en produits finis diffère peu, dans son ensemble de celle de l'année précédente, sauf dans le cas de la morue, et de ses apparentés où la préparation de produits frais ou congelés s'accroît et celle du produit salé ou séché décroît par rapport à l'année précédente.

Les prises en Ontario ont été supérieures à celles de l'année dernière au cours de juin et l'augmentation s'applique à des espèces de prix élevé; la truite, le corégons, le sandre etc. Les exportations de poissons d'eau douce se maintiennent à peu près comme de l'année dernière en volume mais se sont accrues de près de \$600,000 en valeur (janvier à mai).

Les exportations totales des produits et des sous produits de la pêche dépassent de \$1.8 million celles de 1949 à la fin de mai. Il faut signaler une augmentation sensible dans les ventes de poisson frais, congelé et salé. Par contre, les exportations de sardines en conserves ont substantiellement diminué à cause de l'absence de sardines dans la Baie de Fundy au cours des premiers mois de l'année; les exportations d'huiles de poisson et de farine ont également diminué.

Nos inventaires de poisson frais-congelé sont bas à la fin de juin. La diminution des stocks par rapport à l'année dernière est particulièrement significative dans le cas des poissons d'eau douce. Les stocks de filets de morues et de haddock et ceux du saumon enrégistrent également une baisse par rapport à 1949. Les inventaires de poisson salé reflètent un certain surplus de la production de 1949 et ceux de produits saumurés ou de bloaters indiquent un accroissement de production par rapport à l'année précédente.

MONTHLY REVIEW
OF
CANADIAN FISHERIES STATISTICS
JULY 1950

In July the sea-fisheries of CANADA (not including NEWFOUNDLAND) yielded a catch of 144,811,000 lb., valued at \$8,792,000. These figures are higher by 13.7 and 22.8 p.c. respectively than those for July, 1949. Inclusion of the reported value of supplementary landings raises the total value to \$8,924,000.

ATLANTIC COAST landings of 111.0 million pounds were 9.5 p.c. higher whilst the total value of \$3.2 millions was 2.3 p.c. lower than in July of last year. This but reflects the fact that increased landings of the cheaper varieties (sardines, herring etc.) were not great enough to offset the smaller catches of the more valuable species (cod, swordfish, salmon, etc.). However, both the cumulative totals -- 428,040,000 lb. and \$19,395,000 -- are higher than was the case for the same seven months of 1949. For these increases the lobster and halibut fisheries were mainly responsible.

The PACIFIC COAST catch for July, 35.8 million pounds valued on landing at \$5.6 millions, was higher by 30.0 and 43.6 p.c. respectively than the amounts for the same month of last year. The sockeye run was the highlight of the July fisheries, catches of this species being more than double those of last year. Landings of pinks also increased. Totals for the first seven months of 1950 -- 246.0 million lb. and \$13.6 millions -- are much higher than the like figures for 1949.

In general the disposition of the catch on both coasts follows the trends established last year, with rather more emphasis on the production of frozen fillets of groundfish and flatfish.

Stocks of all frozen fish in Canada amounted to 48,440,000 lb. on August 1, 1950, of which 45,209,000 lb. were frozen fresh and 3,231,000 lb. frozen smoked. These holdings are lower by 4,213,000 lb. frozen fresh and higher by 49,000 lb. frozen smoked than those at August 1, 1949. Compared with July 1, 1950 figures they are higher by 7,402,000 lb. frozen fresh and higher by 475,000 lb. frozen smoked. There was an 'into-storage movement' for all classifications of 7.9 million pounds as compared with a similar movement of 6.9 million pounds during July, 1949.

In the first six months of this year the value of exports of fish and fish products amounted to \$49.1 millions -- an increase of 9.1 p.c. over the total for the same period of 1949. Less canned and pickled fish, and fish oils were sold abroad, but exports of all other categories were greater.

The wholesale prices index for fishery products remained stationary for the second month in succession. In sharp contrast, the meat and poultry index soared to a new high. As did the cost of living in Canada.

LA PRODUCTION A LA FIN DE JUILLET

Il n'y a plus rareté de sardines au Nouveau-Brunswick comme ce fut le cas au cours du premier mois de l'année. Au contraire les prises au cours des derniers mois, y compris juillet, ont atteint un nouveau record. L'abondance a même causé un fléchissement dans le prix au pêcheur. En juillet, 16.1 millions de livres ont été capturées, contre 7.2 millions au cours du même mois de l'année précédente. Les prises totales, à date, furent de 31.0 millions de livres comparativement à 18 millions de livres en 1949. A la fin de juillet la mise en conserve de cette espèce s'élevait à 330,000 caisses (100.3 1/4 oz.), soit 100,000 caisses de plus qu'à la même date de l'année précédente.

Les captures de flétan en juillet doublent celles de l'année antérieure pour le même mois. Celles du haddock et du pollock furent également très abondantes mais le rendement de la pêche à la morue a subi un certain fléchissement.

Pour l'ensemble des pêcheries de l'Est, les prises de juillet furent de près de 10 millions de livres supérieures à celles de 1949 pour le même mois et la valeur s'est accrue de près de \$100,000. Le poisson, le homard et les mollusques ont rapporté aux pêcheurs \$19.4 millions depuis le début de l'année comparativement à \$17 millions en 1949. Le homard et le flétan ont principalement contribué à cette augmentation.

La production de poisson frais et congelé a été largement stimulée au cours des sept premiers mois. Ceci s'applique particulièrement au cas de la morue dont la quantité mise au salage a par contre substantiellement diminué par rapport à 1949. Une compétition accrue pour la mise sur le marché du poisson salé en 1950 a causé de changement. Les produits frais ou congelés sont en bonne demande sur les marchés Américain et Canadien.

Les prises de saumon en Colombie-Britannique ont été abondantes au cours du dernier mois. Les captures de sockeye et du saumon rose (pink) ont été particulièrement élevées. La mise en conserve du saumon s'élevait à 389,000 caisses à la fin de juillet comparativement à 258,000 l'année dernière. L'augmentation est quasi exclusivement attribuable au sockeye dont la migration atteint cette année un haut sommet cyclique, lequel se réalise normalement, tous les quatre ans dans la rivière Fraser. Le saumon sockeye est presque totalement mis en conserve et commande la prix le plus élevé des produits du saumon en conserve.

Les prises totales pour juillet en Colombie-Britannique atteignent 33.8 millions de livres contre 26.0 millions l'année précédente. La valeur atteint \$5.6 millions, soit une augmentation de \$1.7 millions par rapport au même mois de 1949. Au total pour les sept premiers mois de l'année, les poissons mollusques et crustacés ont rapporté \$3.5 millions de plus que l'année précédente. Ce résultat est du à l'augmentation des captures et des prix en 1950.

La pêche en eau douce, notamment au Manitoba et en Ontario, a donné un rendement très satisfaisant au cours du dernier mois. Les prises de corégone, doré, sandre, truite etc., se comparent dans l'ensemble favorablement à celles de 1949. Les inventaires de poissons d'eau étaient très bas à la fin de juillet et les ventes sur le marché aux Etats-Unis, pour les six premiers mois, dépassent celles de l'année précédente en quantité et en valeur.

Au premier août, les stocks de poisson de mer frais - congelé étaient plus bas que l'année dernière à la même date. Il en était de même pour le poisson fumé. Pour les Maritimes et le Québec, les inventaires de poisson vert-salé étaient de 5.2 millions de livres inférieurs à ceux de l'année précédente à la même date; l'augmentation des stocks de poisson séché par 2.0 millions de livres, comparativement à 1949, tient pour une bonne part à la production accrue de morue Gaspé Cure pour le marché Italien.

Nos exportations des produits et sous-produits de la pêche s'établissent à \$49 millions pour le premier semestre de 1950, soit une augmentation de plus de \$4 millions par rapport à la même période de l'année dernière. Nos ventes aux Etats-Unis s'accroissent, de \$30.7 millions en 1949 à \$34.5 millions cette année. Cela tient principalement à l'augmentation de nos ventes de poisson frais ou congelé sur ce marché.

MONTHLY REVIEW
OF
CANADIAN FISHERIES STATISTICS
AUGUST 1950

184,167,000 lb. of fish with an initial value of \$10,821,000 -- this was the catch taken by the sea-fishermen of CANADA (other than NEWFOUNDLAND) in August. These are by far the highest figures for any month since the inauguration of this Review four years ago. Including the reported value of supplementary landings, the grand total for August is \$10,945,464.

On the PACIFIC COAST landings and landed values of 67,506,000 lb. and \$7,200,000 are higher by 7.6 and 8.5 p.c. respectively than the corresponding totals for August, 1949. Increased landings of salmon -- particularly of chum, pink and sockeye -- more than offset declines in almost all the other fisheries. The tuna catch has again proved disappointing. Totals for the January-August period -- 313,507,000 lb. and \$20,779,000 -- are still much higher than the figures for the first eight months of 1949.

The ATLANTIC COAST landings and landed values -- 116,661,000 lb. and \$3,621,000 -- are higher by 33.0 and 17.4 p.c. respectively than the like figures for August, 1949. All the major species except mackerel were landed in greater quantities, the biggest increases being recorded in the herring and "sardine" fisheries, although the value of the latter declined appreciably. Landed values of the halibut and lobster catches showed marked increases. For the first eight months of the year the cumulative totals -- 544,701,000 lb. and \$23,016,000 -- are 12.1 and 14.6 p.c. higher than the amounts for the same period of last year.

Stocks of all frozen fish in CANADA (including NEWFOUNDLAND) amounted to 53,860,000 lb. on September 1, 1950, of which 50,086,000 lb. were frozen fresh and 3,774,000 lb. frozen smoked. These holdings are lower by 698,000 lb. frozen fresh and higher by 278,000 lb. frozen smoked than those at September 1, 1949. Compared with August 1, 1950 figures they are higher by 4,838,000 lb. frozen fresh and higher by 494,000 lb. frozen smoked. There was an "into-storage" movement for all classifications of 5.3 million pounds as compared with a similar movement of 1.7 million pounds during August, 1949.

The value of exports of fish and fish products in the first seven months of 1950 amounted to \$59.9 millions -- 13.2 p.c. higher than the total for the same period of last year. There still continue to be increased exports of all categories other than canned and pickled fish, and fish oils.

PÊCHE FRUCTUEUSE EN AOÛT (1)

La pêche a été très fructueuse au cours du mois d'août, les résultats tant en eau salée qu'en eau douce dépassant de façon significative ceux de l'année précédente. Même si la migration du Sockeye ne s'est pas réalisée vers la rivière Adams en Colombie-Britannique, les résultats d'ensemble pour cette province et la pêche au saumon en particulier n'en furent pas moins satisfaisants.

Les mises à terre, en août, sur la côte de l'Atlantique, atteignirent 116.7 millions de livres, avec une valeur au pêcheur de \$3.6 millions. Comparativement au même mois de l'année précédente, c'était une augmentation de 33 pour cent dans les captures et de 17.4 pour cent dans la valeur. Pour un premier mois, au cours de la saison d'été, les prises de morue ont été supérieures à celles du mois correspondant de l'année précédente. Les captures de sardines atteignirent 18.2 millions de livres au cours du mois, contre 13.4 millions durant le même mois de 1949. L'abondance de cette espèce et les difficultés rencontrées dans la mise sur le marché des sardines en conserve ont toutefois causé un fléchissement des prix comparativement à 1949, fléchissement qui s'est accentué en août. La plupart des autres espèces ont aussi été capturées en plus grande quantité. Les prises de flétan dépassèrent d'un million de livres celles d'août 1949 et celles du homard furent supérieures par 0.6 million de livres. Les prix sont généralement plus élevés que l'année dernière sauf pour certaines espèces telles la morue, le hareng, etc.

Sur la côte du Pacifique l'absence de migration du Sockeye vers la rivière Adams a causé une grande déception et occasionné une perte importante pour l'industrie. Toutefois les résultats pour l'ensemble des pêcheries en août, se comparent très favorablement à ceux de 1949, les mises à terre et la valeur au pêcheur étant respectivement 7.6 pour cent et 8.5 pour cent supérieures pour le mois. Les prises totales de saumon atteignirent 64.2 millions de livres en août contre 55.6 millions de livres pour le même mois de 1949. Les mises à terre du saumon chum et du saumon rose furent particulièrement importantes.

La pêche en eau douce a été très bonne au cours du dernier mois. Les prises de corégone ont été très élevées au Manitoba, atteignant 430,000 livres contre 69,000 livres l'année précédente. En Ontario et au Grand Lac des Esclaves, deux autres centres importants de production, la pêche a fourni un très bon rendement.

Les inventaires de poisson frais-congelé sont généralement bas au premier septembre. La quantité de poisson de mer et d'eau douce en entrepôts est légèrement inférieure à celle de l'année précédente à la même date. Il convient pourtant de noter que les stocks de filets de morue de l'Atlantique sont de 6.1 millions de livres au premier septembre, contre 3.7 millions à la même date de 1949.

Les inventaires de poisson traité sont dans l'ensemble inférieurs à ceux de l'année précédente. Comparativement à 1949, il convient de noter une diminution importante des stocks de morue verte-salée et de maquereau de printemps, ces faits trouvant leur explication dans une production à échelle réduite.

Nos exportations des produits et sous-produits de la pêche atteignaient \$59.9 millions à la fin de juillet, soit une augmentation de 13.2 pour cent par rapport à 1949. Nos ventes de poisson frais ou congelé et de mollusques furent de beaucoup supérieures à celles des sept premiers mois de 1949. L'écoulement d'un surplus de poisson salé de Terre-Neuve, production de 1949, a aussi contribué à l'augmentation pour l'année courante.

MONTHLY REVIEW
OF
CANADIAN FISHERIES STATISTICS
SEPTEMBER 1950

In September landings and landed values in the sea-fisheries of CANADA (other than NEWFOUNDLAND) amounted to 126,852,000 lb. and \$8,004,000. These figures exceed the comparable totals for September, 1949, by 4.1 and 22.6 p.c. respectively. Inclusion of the reported value of supplementary landings brings the grand total for the month to \$8,056,247.

On the ATLANTIC COAST the catch -- 81,614,000 lb. -- was 2.2 p.c. higher, but the value to the fisherman -- \$2,825,000 -- was 1.2 p.c. lower than the corresponding figures for the same month of 1949. For the first nine months of the year the cumulative totals of 626,385,000 lb. and \$25,841,000 were higher by 10.7 and 12.7 p.c. respectively than those for the like period of last year. The most notable increases were in the value of the lobster and halibut fisheries, the most notable declines those of cod and sardines.

On the PACIFIC COAST landings and landed values -- 45,238,000 lb. and \$5,180,000 -- were higher by 7.6 and 41.1 p.c. respectively than the amounts for September, 1949. Increases in the value of the catch of coho and chum more than offset the corresponding cyclical decrease in the landings of pink salmon. For the January - September period of this year the cumulative totals of 358,745,000 lb. and \$25,959,000 are higher by 17.7 and 27.1 p.c. than the amounts for the same nine months of 1949. The species contributing most to these increases were salmon, halibut and herring.

Stocks of all frozen fish in CANADA amounted to 56,968,000 lb. on October 1, 1950, of which 53,591,000 lb. were frozen fresh and 3,377,000 lb. frozen smoked. These holdings are higher by 4,603,000 lb. frozen fresh and by 222,000 lb. of frozen smoked than those at October 1, 1949. There was an "into-storage" movement for all classifications of 1.8 million pounds as compared with an opposite movement of 2.1 million pounds during September, 1949.

The value of exports of fish and fish products in the first eight months of 1950 amounted to \$69,797,921 -- 14.4 p.c. higher than the total for the like period of last year.

SALMON-PACIFIC

JAN. FEB. MAR. APR. MAY JUNE JULY AUG. SEPT. OCT. NOV. DEC.

LE SALMON PROCURE UNE AUGMENTATION AU REVENU DES PECHEURS (1)

Les résultats de la pêche maritime furent supérieurs à ceux de l'année précédente au cours de septembre. Pour l'ensemble du Canada, à l'exclusion de Terre-Neuve, les mises à terre pour le mois atteignaient 126.9 millions de livres évaluées au pêcheur à \$8.0 millions contre 121.9 millions de livres et \$6.5 millions en septembre 1949. C'était une augmentation de 4.1 pour cent en quantité et de 22.6 pour cent en valeur. Un fort pourcentage de l'accroissement en valeur est attribuable aux prix plus élevés payés pour le saumon en Colombie-Britannique.

Sur la côte de l'Est les mises à terre ont été légèrement supérieures à celles du même mois de 1949. La pêche au flétan et aux autres poissons plats triple presque celle de septembre 1949 et celle du homard maintient encore une avance par rapport à l'année dernière. Ces dernières pêcheries ont fourni un très haut rendement au cours de la présente année. Par contre on doit signaler une halte dans la migration des sardines dans la baie de Fundy, migration qui fut très intense au cours des mois précédents. La migration de sardines de petite taille qu'on met en conserves principalement pour le marché canadien fut très peu importante. Les primes de morue furent aussi inférieures à celles de septembre 1949.

En Colombie-Britannique les prises de saumon étaient de 42.3 millions de livres pour septembre avec une valeur au pêcheur de \$5.0 millions, comparativement à 39.1 millions de livres et \$3.5 millions de livres et \$3.5 millions au cours du même mois de l'année précédente. Il convient de signaler les captures très élevées de saumon chum: elles furent de 28.1 millions de livres avec une valeur au pêcheur de \$2.4 millions, soit une augmentation de 20.1 millions de livres et de près de \$2.0 millions par rapport à septembre 1949. Par contre les mises à terre de saumon rose sont beaucoup inférieures à celles de 1949. Cela tient à ce que le cycle bi-annuel de migration pour cette espèce est à une phase inférieure en 1950. Le prix du saumon a été à un niveau élevé au cours du dernier mois. Suite au manque de migration du saumon sockeye en août dernier les industriels prévoient une certaine rareté de saumon en conserves - au moins pour quelque catégories - et cela semble effectuer un raffermissement des prix.

Les stocks de poisson de mer frais-congelé au premier octobre sont supérieurs à l'année dernière à la même date. L'augmentation est principalement attribuable aux filets de morue, au saumon chum et coho. Les inventaires de poisson d'eau douce sont aussi accrus d'un demi million de livres par rapport à l'année précédente, le corégone étant l'espèce principale contribuant à l'accroissement.

A la fin du mois d'août les exportations des produits et sous-produits de la pêche étaient de \$69.8 millions soit une augmentation de 14.4 pour cent par rapport à la même période de 1949. Les ventes aux Etats-Unis sont passées de \$42.1 millions au cours des huit premiers mois de 1949 à \$50.9 millions pour la présente année. Ce résultat tient surtout de l'augmentation des expéditions de poisson frais ou congelé à ce pays. Les ventes de poisson saumuré, de sardines en conserves et d'huiles de poisson ont pourtant diminué sensiblement au cours de la présente année.

MONTHLY REVIEW
OF
CANADIAN FISHERIES STATISTICS
OCTOBER 1950

In October, in the sea-fisheries of CANADA (other than NEWFOUNDLAND), landings of 74,780,000 lb. with a landed value of \$6,326,000, were 39.6 p.c. lower and 53.5 p.c. higher respectively than the comparable figures for the same month of 1949. Including the reported value of supplementary landings, the grand total for October is \$6,372,000.

During the month PACIFIC COAST landings of 36,228,000 lb. were 49.0 p.c. lower, but the value of the catch -- \$4,554,000 -- was 101.4 p.c. higher than the corresponding figures for October, 1949. This state of affairs was caused almost entirely by a huge decline in the catch of one of the cheaper species, herring, and a big increase in the landings of one of the most valuable fisheries, that of chum salmon. However, latest reports would indicate that the herring season merely was later in starting this year. For the ten months ending with October, the cumulative totals of 394,973,000 lb. and \$30,505,000 are 5.1 and 34.4 p.c. higher respectively than the figures for the like period of 1949.

On the ATLANTIC COAST the catch and catch values -- 38,552,000 lb. and \$1,772,000 were lower by 27.0 and 4.7 p.c. than the amounts for October, 1949. Again the most notable decreases were registered in the sardine and cod fisheries. For the ten-month period under review the cumulative totals of 664,937,000 lb. and \$27,613,000 are higher by 7.6 and 11.6 p.c. respectively.

Stocks of all frozen fish in CANADA amounted to 61,213,000 lb. on November 1, 1950, of which 57,953,000 lb. were frozen fresh and 3,260,000 lb. frozen smoked. These holdings are higher by 4,000,000 lb. frozen fresh and higher by 255,000 lb. frozen smoked than those at November 1, 1949. Compared with October 1, 1950, figures they are higher by 4,277,000 lb. frozen fresh and lower by 135,000 lb. frozen smoked. There was an "into-storage" movement for all classifications of 4.1 million pounds as compared with a similar movement of 4.8 million pounds during October, 1949.

Exports of fish and fish products continue at the same high level, the total for the first nine months of this year -- \$82,344,647 -- being 14.2 p.c. higher than the figure for the corresponding period of 1949.

LA PÊCHE AU SAUMON MAINTIENT SON HAUT RENDEMENT (1)

La pêche au saumon sur la côte du Pacifique a été très fructueuse en octobre et a principalement contribué à l'augmentation de la valeur de nos pêcheries pour ce mois comparativement à l'année dernière. La valeur totale des pêcheries maritimes (à l'exclusion de Terre-Neuve) fut de \$6.3 millions pour le mois, contre \$4.1 millions en octobre 1949. Les prises ont pourtant diminué de beaucoup, enregistrant une diminution de 39.6 pour cent par rapport au même mois de l'année dernière. Cela s'explique surtout par le fait que la pêche au hareng n'a pas été poursuivie en Colombie Britannique au cours d'octobre, comme ce fut le cas en 1949.

Les débarquements de poissons et de crustacés sur la côte de l'Atlantique, en octobre, s'élevaient à 38.5 millions de livres avec une valeur de \$1,772,000. Par rapport au même mois de l'année précédente, c'était une diminution de 26.5% dans la quantité et de 4.7% dans la valeur. Un facteur principal dans la diminution des captures est le ralentissement dans la pêche à sardine.

La pêche à l'éperlan a débuté en septembre sur la côte de l'Est du Canada et a procuré de très bons résultats à date. Les prises totales pour septembre et octobre atteignirent 1.15 million de livres évaluées au pêcheur à \$155,000. Pour la même période 1949 les captures étaient de 0.67 million de livres avec une valeur de \$84,000. C'est donc une augmentation au cours de la présente saison de 71 pour cent en quantité et de 85 en valeur, les prix étant substantiellement plus élevés cette année.

Les prises d'huîtres - autre pêche d'automne - n'ont pas été aussi importantes au cours de la présente saison que l'année dernière. Pour le mois de septembre et octobre la récolte fut de 5.3 millions de livres, évaluée à \$284,000. Par rapport aux mêmes mois de l'année précédente, c'était une diminution de 32 pour cent quantité et de 21.5 pour cent en valeur, les prix étant supérieurs en 1950.

Les captures totales en Colombie-Britannique furent de 36.2 millions de livres en octobre comparativement à 71.0 millions au cours du même mois de 1949. Cet écart est dû au fait que la pêche au hareng ne fut ouverte qu'au premier novembre cette année alors que des opérations de pêche importantes pour ce poisson furent poursuivies au cours d'octobre 1949. La valeur des prises pour le dernier mois fut quand même supérieure cette année atteignant \$4.6 millions, contre \$2.2 millions au cours du même mois de 1949. Ce résultat tient principalement aux prises élevées de saumon lequel commande des prix très favorables au cours de la présente saison.

Pour un second mois consécutif les prises de saumon chum ont été très abondantes au cours d'octobre et le prix payé au pêcheur a été élevé. Les prises de cette espèce pour le mois atteignaient 30.9 millions de livres évaluées au pêcheur à \$3.7 millions, comparativement à 13.8 millions de livres et \$1.1 million en octobre 1949. Les captures de saumon coho furent également abondantes, les mises-à-terre pour octobre faisant plus que doubler celles du même mois de 1949.

Les exportations des produits et sous produits de la pêche s'évaluent à \$82.3 millions à la fin de septembre dernier, soit une augmentation de 14.2 pour cent par rapport à 1949. Comparativement à l'année dernière, nos ventes aux Etats-Unis ont augmenté de plus de \$10 millions au cours des neuf premiers mois, tandis que les expéditions aux autres pays se sont dans l'ensemble maintenues à un niveau identique en valeur. Les expéditions de poisson frais et congelé furent très élevées au cours de 1950 et la production de l'année courante est précisément caractérisée par une augmentation importante dans la préparation de ces catégories de produits.

MONTHLY REVIEW
OF
CANADIAN FISHERIES STATISTICS
NOVEMBER 1950

In November landings and landed values in the sea-fisheries of CANADA (other than NEWFOUNDLAND) amounted to 149,574,000 lb. and \$4,741,000. These figures exceed the November, 1949, totals by 29.5 and 65.8 p.c. respectively. Inclusion of the reported value of supplementary landings brings the grand total for the month to \$4,807,570.

On the ATLANTIC COAST the catch -- 30,838,000 lb. -- was 30.8 p.c. higher, and the value to the fisherman -- \$1,448,000 -- 39.4 p.c. higher than the corresponding figures for the same month of 1949. For the first eleven months of the year the cumulative totals of 695,775,000 lb. and \$29,061,000 were higher by 8.4 and 12.8 p.c. respectively than those for the same period of last year. Increases in the value of the lobster, halibut and haddock fisheries more than offset declines in other species, notably cod and sardines.

On the PACIFIC COAST landings and landed values -- 118,736,000 lb. and \$3,293,000 -- were higher by 29.2 and 80.9 p.c. respectively than the comparable figures for November, 1949. The chum salmon and herring fisheries were the main contributors to these increases. For the eleven-month period under review the cumulative totals of 513,709,000 lb. and \$33,798,000 were higher by 9.8 and 37.9 p.c. than the amounts for the same period of last year. The species responsible for these increases were chum, sockeye and coho salmon, and halibut.

Stocks of all frozen fish in CANADA amounted to 54,723,000 lb. on December 1, 1950 of which 51,864,000 lb. were frozen fresh and 2,859,000 lb. frozen smoked. The holdings were higher by 5,360,000 lb. frozen fresh, and 395,000 lb. frozen smoked than those at December 1, 1949. Compared with November 1, 1950 figures they are lower by 6,347,000 lb. frozen fresh and by 380,000 lb. frozen smoked. There was an "out-of-storage" movement for all classifications of 6.7 million pounds as compared with a similar movement of 8.0 million pounds during November, 1949.

The value of exports of fish and fish products in the first ten months of 1950 amounted to \$94,729,824 -- 12.1 p.c. higher than the total for the like period of 1949.

CAPTURES ELEVEES EN NOVEMBRE (1)

La pêche à l'éperlan et la récolte des huitres, deux pêcheries caractéristiques d'automne sur la côte de l'Atlantique, ont été très satisfaisantes au cours de novembre. Les prises d'éperlan furent de 856,000 livres pour le mois, contre 514,000 livres en novembre 1949. La prise cumulative, depuis l'ouverture de la saison en septembre, atteint 2.1 millions de livres évaluées à \$205,000, comparativement à 1.2 millions de livres et \$160,000 en 1949. Le prix de l'éperlan a été généralement supérieur à celui de l'année précédente au début de la saison, mais l'abondance des approvisionnements a pourtant causé un certain déclin au cours des dernières semaines de novembre.

La récolte des huitres fut de 3 millions de livres en novembre, comparativement à 2.5 millions au cours du même mois de l'année précédente. Les mises à terre depuis septembre sont pourtant inférieures à celles de 1949, en raison d'un rendement plutôt médiocre au cours des deux premiers mois de la saison. Ceci explique probablement les prix fermes qui ont prévalu à date en 1950.

Les autres pêcheries importantes de la côte de l'est, à l'exception de celle à la sardine et au maquereau, ont fourni des mises à terre supérieures à celles de 1949 au cours du dernier mois. Les prises de poissons de fonds, morue et ses apparentés, flétan et plie ont été élevées. Au total les captures de poissons, crustacés et mollusques pour la côte de l'est atteignaient 30.8 millions de livres pour le mois, évaluées au pêcheur à près de \$1.5 millions. C'était une augmentation de 30.8 pour cent en quantité et de 39.4 pour cent en valeur par rapport au même mois de l'année précédente.

En Colombie-Britannique les pêcheries importantes pour le mois étaient celles du hareng et du saumon chum. Les mises à terre du hareng furent de 105 millions de livres en novembre, contre 84 millions au cours du même mois de 1949. Celles du saumon chum doublèrent les captures de novembre de l'année précédente. Le total des prises de toutes les espèces pour le mois fut de 119 millions de livres évaluées aux pêcheurs à \$3.3 millions, soit une augmentation de 29.2 pour cent en quantité et de 80.9 pour cent en valeur par rapport à novembre 1949. L'accroissement en valeur est principalement attribuable au haut rendement de la pêche au saumon chum et au prix élevé obtenu pour cette espèce.

Les inventaires de poisson de mer frais-congelé étaient de 47.4 millions de livres au premier décembre comparativement à 41.2 millions à la même date de 1949. Les stocks de saumon chum et coho et ceux de filets de morue sont beaucoup plus élevés cette année. Pour le poisson d'eau douce et le poisson fumé congelés il y avait peu de variante par rapport à l'année précédente.

Les stocks de poisson salé, morue et ses apparentés, se situent dans l'ensemble près de la normale. Toutefois les stocks de colin et de morue séchée fortement salée sont supérieures à ceux de l'année précédente. Les stocks élevés de colin reflètent une production pratiquement trois plus grande qu'en 1949; les ventes de morue séchée fortement salée ont été lentes au cours des derniers mois.

Les exportations des produits et sous-produits de la pêche étaient de \$94.7 millions à la fin d'octobre, soit une augmentation de 12.1 pour cent comparativement à la même période de 1949. Nos ventes de produits frais et congelés aux Etats-Unis se maintiennent toujours à un haut niveau.

MONTHLY REVIEW
OF
CANADIAN FISHERIES STATISTICS
DECEMBER 1950

24-003

In the sea-fisheries of CANADA (other than NEWFOUNDLAND), December landings and landed values -- 114,819,000 lb. and \$4,459,000 -- were 58.8 and 37.0 p.c. higher respectively than the comparable figures for December, 1949. Including the reported value of supplementary landings, the grand total for the month was \$4,498,530. Cumulative totals for the year 1950 were 1,331,709,000 lb. and \$67,547,000, an increase of 12.7 and 26.2 p.c. respectively over the previous year's landings and landed values.

PACIFIC COAST catch and catch values for December were 91,263,000 lb. and \$1,349,000. These figures exceed by 92.8 and 96.7 p.c. the totals for the same month of 1949. Much greater landings of herring were almost wholly responsible for these increases. During the year 605.4 million pounds of fish (an increase of 17.5 p.c.) with a value to the fisherman of \$35.2 millions (an increase of 39.7 p.c.) were hauled from British Columbian waters. The most profitable gains were made in the chum, sock-eye, halibut, coho and herring fisheries.

ATLANTIC COAST December landings and landed values -- 23,556,000 lb. and \$3,110,000 -- were 5.7 p.c. lower in volume, but 21.1 p.c. higher in value than the figures for the same month of 1949. A big decrease in the landings of cod was more than offset by an increase in the value of the lobster catch. For the whole year totals of 726,277,000 lb. and \$32,328,000 were higher by 8.9 and 14.1 p.c. than the comparable totals for 1949. Largest increases were registered in the lobster, halibut and haddock fisheries. Catches of cod and sardines were lower in value.

In 1950 a greater percentage of the ATLANTIC 'cod and related species' and halibut landings became fresh and frozen fillets. More of the mackerel catch was disposed of as pickled fillets, while a larger portion of the lobster landings was sold 'in shell'. There were no other notable changes in intended disposition on that coast.

In BRITISH COLUMBIA no marked changes in the disposition of the 1950 landings were noted. However, a slightly higher percentage of the herring catch was dry-salted.

Stocks of all frozen fish in Canada on January 1st, 1951, amounted to 45,890,000 lb., of which 43,336,000 lb. were frozen fresh and 2,554,000 lb. frozen smoked.

The higher level of exports of fish and fishery products is being maintained. To the end of November the total was \$108.0 millions as compared with \$95.7 millions in the same period of 1949.

PRODUCTION ACCRUE DE POISSON FRAIS EN 1950 (1)

La pêche au homard a été fructueuse au cours de décembre dernier. Les prises ont atteint 6.2 millions de livres, avec une valeur au pêcheur de \$2.3 millions. Par rapport au même mois de 1949, c'était une augmentation de 16 pour cent en quantité et de 32 pour cent en valeur, le prix au pêcheur étant plus élevé qu'en 1949.

Par contre, le rendement de la pêche à la morue a été médiocre au cours de décembre et les prises de flétan ont été basses. Pour l'ensemble des pêcheries de la côte de l'Est (à l'exclusion de Terre-Neuve) les prises totales furent de 23.5 millions de livres pour le mois, avec une valeur au pêcheur de \$3.1 millions. Par rapport à décembre 1949, le rendement en quantité était diminué, mais l'apport important du homard a causé un accroissement en valeur.

Pour l'année entière, les prises de poisson sur la côte de l'Est atteignent 726 millions de livres à la fin de décembre avec une valeur au pêcheur de \$32.3 millions. Ces résultats dépassent ceux de 1949 par 8.9 pour cent en quantité et 14.1 pour cent en valeur. Les mises à terre importantes et les prix élevés du homard, du flétan et de l'aiglefin expliquent principalement l'augmentation en valeur par rapport à 1949.

Sur la côte du Pacifique, les mises à terre de hareng furent très importantes en décembre, doublant presque les résultats du même mois de 1949. Dès le quinze du mois le quota de 30,000 tonnes pour le secteur nord était rempli. Par contre, la mauvaise température et l'absence du hareng dans le secteur ouest de l'Ile Vancouver ont singulièrement limité les captures à cet endroit. Les prises totales pour ce district étaient de 9,200 tonnes à la fin de décembre contre 30,800 tonnes en 1949.

Pour le total de 1950, les résultats de la pêche en Colombie-Britannique furent de beaucoup supérieurs à ceux de 1949. Les captures importantes de saumon et les prix élevés obtenus pour la plupart des espèces capturées ont causé cet accroissement. Pour 1950, les prix obtenus par les pêcheurs furent d'environ 8 pour cent supérieurs à ceux de 1949. La valeur totale des pêcheries de cette province atteignait \$35.2 millions à la fin de décembre, soit une augmentation de près de 40 pour cent comparativement à l'année précédente.

La production de 1950 se caractérise par un accroissement sensible, comparativement à 1949, dans la mise sur le marché de produits frais ou congelés. Cette remarque s'applique à la côte de l'Est y compris Terre-Neuve et aussi à la côte de l'Ouest. Cela tient principalement à l'accroissement en importance du marché américain. Pour les Maritimes, Terre-Neuve et Québec la production de filets frais et congelés de morue fut de beaucoup supérieure à celle de 1949 et la préparation de morue salée a été de beaucoup diminuée.

A la fin de décembre les stocks de poisson frais-congelé sont légèrement supérieurs à ceux de l'année dernière. L'augmentation s'applique au saumon, flétan et hareng. Les inventaires de filets de morue ne sont que légèrement supérieurs à ceux de l'année précédente. Les stocks de poisson salé et saumuré se rapprochent de la normale, étant beaucoup plus bas que l'an dernier à Terre-Neuve.

Au total les exportations des produits et sous-produits de la pêche atteignent \$108 millions à la fin de novembre, contre \$95.7 millions à la même date de 1949. Nos ventes de produits frais ou congelés aux Etats-Unis furent substantiellement plus élevées en 1950 qu'en 1949.

MONTHLY REVIEW
OF
CANADIAN FISHERIES STATISTICS
JANUARY 1951

January landings of sea-fish in CANADA (apart from NEWFOUNDLAND) amounted to 127,103,000 lb., an increase of 66.8 p.c. over the total for January, 1950. The landed value -- \$3,219,000 -- was 45.7 p.c. higher than in the same month of last year. Inclusion of the reported value of supplementary landings raises the grand total to \$3,232,504.

On the PACIFIC COAST the catch and catch value -- 107,437,000 lb. and \$1,532,000 -- were 76.8 and 106.5 p.c. higher respectively than the figures for January, 1950. Huge landings of herring were almost wholly responsible for these phenomenal gains.

On the ATLANTIC COAST landings and landed values -- 19,666,000 lb. and \$1,687,000 -- were 27.4 and 15.0 p.c. respectively above the totals for January, 1950, increases being registered in all major species with the exception of halibut, clams and smelts.

During 1950 fishery products to the value of \$118.5 millions were exported, an increase of 11.9 p.c. over the total for the previous year. Shipments of canned fish were 17.6 p.c. lower, foreign sales of canned salmon in particular declining by \$1.6 millions. Exports of pickled fish, fish meal and vitamin oils also were lower than in 1949, but these losses were more than offset by gains in other categories. Exports of fresh and frozen, whole or dressed fish were \$10.2 millions higher, while those of fresh and frozen fillets increased by \$3.8 millions.

Stocks of all frozen fish in CANADA amounted to 38,734,000 lb. on February 1, 1951, of which 36,240,000 lb. were frozen fresh and 2,494,000 lb. frozen smoked. These holdings are lower by 7,671,000 lb. frozen fresh and by 124,000 lb. frozen smoked than those at January 1, 1951. Compared with February 1, 1950 figures they are higher by 4,087,000 lb. frozen fresh and by 591,000 lb. frozen smoked. There was an "out-of-storage" movement for all classifications of 7.8 million pounds as compared with a similar movement of 7.4 million pounds during January, 1950.

MILLION POUNDS

PECHE ABONDANTE EN JANVIER (1)

La pêche à l'éperlan atteint généralement son maximum en janvier sur la côte de l'Est. Les prises du mois ont été pratiquement identiques à celles de janvier 1950, atteignant 1.8 millions de livres. Toutefois, la valeur au pêcheur fut de \$233,000, contre \$271,000 en janvier de l'année précédente. Le prix de l'éperlan a été très ferme au début de la saison, c'est-à-dire de septembre à novembre 1950. Toutefois, au cours des deux derniers mois le prix a fléchi quelque peu en raison de l'abondance des captures. Les mises à terre totales d'éperlan, depuis l'ouverture de la saison en septembre, atteignaient 5.2 millions de livres à la fin de janvier, soit 1.0 million de livres de plus que pour la saison précédente. Malgré le fléchissement du prix au cours des dernières semaines, la valeur pour la saison en cours était de \$684,000 à la fin de janvier, contre \$590,000 l'année dernière.

Les mises à terre de la morue et de l'aiglefin en janvier ont été plus élevées qu'en 1950. Le prix de la morue était quelque peu supérieur à celui de 1950 à Halifax, tandis que celui de l'aiglefin était légèrement plus bas. Les approvisionnements de filets d'aiglefin ont été abondants sur le marché américain au cours des derniers mois.

Les prises de homard ont été très satisfaisantes au cours du mois en Nouvelle-Ecosse. Les mises à terre furent de 1.9 millions de livres, évaluées au pêcheur à \$804,000, contre 1.5 million de livres et \$678,000 en janvier 1950.

Pour l'ensemble des pêcheries de la côte de l'Est à l'exclusion de Terre-Neuve, les mises à terre totales furent de 19.7 millions de livres pour le mois, avec une valeur de \$1.7 million, soit respectivement 27.4 pour cent et 15.0 pour cent plus élevées qu'en janvier de l'année précédente.

La principale pêche qui se poursuit à cette période de l'année en Colombie-Britannique est celle du hareng. Les mises à terre pour le mois furent de 105.5 millions de livres, contre 60.0 millions au cours de janvier 1950. Il est opportun de rappeler que la pêche au hareng est réglementée. Le quota pour le district nord fut élevé par 40 millions de livres en janvier 1951. Au 31 du même mois une autre addition de 20 millions de livres a été également ajoutée au quota du district central, de sorte que la pêche au hareng pour la saison 1950-51 atteindra probablement un record. La demande est ferme pour l'huile et la farine de hareng, ces dernières étant les deux principaux produits de cette pêche.

La pêche d'hiver au Manitoba se poursuit à un rythme très satisfaisant. Les prises de corégone et de doré furent particulièrement abondantes au cours des derniers mois. Les mises à terre totales depuis le début de la saison furent de 4.1 millions de livres, avec une valeur au pêcheur de \$639,000. Cette valeur dépasse de beaucoup celle de la saison précédente, tandis que les captures sont légèrement inférieures en raison d'une diminution des prises de brochets et de dorés noirs.

Les inventaires de poisson de mer frais-congelé sont légèrement plus élevés que l'année dernière au premier février. L'augmentation s'applique principalement au saumon et au hareng. Les stocks de poisson d'eau douce sont bas. Ceux de poisson salé sont inférieurs à ceux de l'année précédente dans les Provinces Maritimes, Terre-Neuve et Québec.

Les exportations des produits et sous-produits de la pêche ont atteint \$118.5 millions au cours de 1950 comparativement à \$105.9 pour l'année précédente. Comparativement à 1949, nos ventes de produits congelés ont subi une très forte augmentation. Toutefois, la valeur de nos exportations de poisson en conserve et en saumure ainsi que des sous-produits a diminué légèrement.

MONTHLY REVIEW
OF
CANADIAN FISHERIES STATISTICS
FEBRUARY 1951

In February the sea-fisheries of CANADA (apart from Newfoundland) yielded a catch of 49,353,000 lb., with a value to the fisherman of \$1,779,000. These figures are 59.5 and 24.3 p.c. respectively lower than the corresponding figures for February, 1950. Including the reported value of supplementary landings, the grand total for the month is \$1,818,000.

On the PACIFIC COAST landings and landed values -- 32,292,000 lb. and \$583,000 -- were down from the February, 1950, totals by 70.2 and 58.7 p.c. respectively. These huge decreases were caused by a corresponding huge decline in the catch of herring during the month -- from 106.6 down to 29.0 million pounds. However, this only reflects the fact that the present season's heaviest run, which began a month earlier than last, is tapering off a month earlier. Latest reports from British Columbia would indicate that total landings for the 1950-51 season were slightly higher than in the 1949-50 period.

On the ATLANTIC COAST landings and landed values -- 17,061,000 lb. and \$1,196,000 -- were 26.3 and 27.6 p.c. higher than the like figures for February, 1950. The biggest increase was noted in the cod fishery, which seems to have got off to a better start this year.

During January the value of EXPORTS of fish and fish products amounted to \$11,520,000 as compared to \$8,193,000 in January of last year.

STOCKS of all frozen fish in Canada amounted to 32,248,000 lb. on March 1, 1951 of which 30,089,000 lb. were frozen fresh and 2,159,000 lb. frozen smoked.

MILLION POUNDS

LA PECHE FOURNIT DE MEILLEURS RESULTATS EN 1951

Pour la Côte de l'Est, les prises de poisson ont été élevées au cours de février. Les mises à terre de la morue doublèrent celles du même mois de l'année précédente. Celles du flétan, des sardines, des éperlans et du homard furent de beaucoup supérieures à celles de février 1950. Par contre, les mises à terre d'aiglefin ont subi une forte diminution.

Pour les deux premiers mois de l'année, les prises de morue atteignent 14.5 millions de livres, avec une valeur au pêcheur de plus d'un demi-million de dollars, contre 8.6 millions de livres et \$300,000 en 1950. Les captures d'éperlan, depuis le début de la saison en septembre dernier, atteignaient 7.8 millions de livres à la fin de février, avec une valeur de plus d'un million de dollars. A la fin du même mois de 1950, les chiffres correspondants pour cette pêche étaient 5.7 millions de livres et \$780,000.

Les mises à terre totales sur la Côte de l'Est, à l'exclusion de Terre-Neuve, étaient de 36.7 millions de livres pour les deux premiers mois de 1951, avec une valeur au pêcheur de \$2.9 millions. Comparativement à 1950, c'était 27 pour cent de plus en quantité et 24 pour cent de plus en valeur. A Terre-Neuve, la production de poisson congelé au cours de janvier et février est à peu près équivalente à celle des mêmes mois de 1950.

Sur la côte du Pacifique les mises à terre de hareng en février ont été de beaucoup inférieures à celles du même mois de 1950. Cela tient principalement à ce que le quota pour le district nord avait été complété dès la mi-janvier. A la fin de la saison, soit le 17 mars, les prises pour 1950-51 s'élevaient à 187,200 tonnes, contre 183,000 tonnes en 1949-50 (pêche d'automne et d'hiver). La production des principaux produits de cette espèce se comparent comme suit à celle de la saison précédente:

<u>Produits</u>	<u>Saison 1950-51</u>	<u>Saison 1949-50</u>
Farine (tonnes)	31,349	30,679
Huile ('000 gallons)	3,258	3,305
Salé à sec (tonnes)	4,177	3,284
En conserves ('000 caisses)	117	76

Les résultats de la pêche au hareng en Colombie-Britannique sont inférieurs par 2,000 tonnes seulement au chiffre record atteint en 1948-49. La demande pour l'huile et la farine est très satisfaisante présentement. La production de hareng salé à sec s'est accrue d'année en année dans l'après-guerre pour satisfaire la demande en Orient.

Les inventaires de poisson frais-congelé sont légèrement supérieurs à ceux de l'année précédente, au premier mars. L'augmentation est due principalement au flétan et au hareng. Les stocks de poisson salé et saumuré sont bas dans les Maritimes, Terre-Neuve et Québec. Les exportations des produits et sous-produits de la pêche atteignaient \$11.5 millions en janvier, contre \$8.2 millions en janvier 1950. Presque toutes les catégories de produits montraient une augmentation.

MONTHLY REVIEW
OF
CANADIAN FISHERIES STATISTICS
MARCH 1951

In March landings in the sea-fisheries of CANADA (not including NEWFOUNDLAND) amounted to 30,143,000 pounds with a landed value of \$1,614,000. These figures are 27.8 and 41.3 p.c. higher respectively than those for the same month of last year. When the reported value of supplementary landings is added the grand total for March is \$1,674,000.

Cumulative totals for the first quarter -- 206,592,000 lb. and \$6,616,000 -- are 6.8 p.c. lower in volume but 16.3 p.c. higher in value than for the same period of 1950. Greatly decreased landings of one of the cheapest species -- Pacific herring -- were more than counterbalanced by an increased catch of lobsters.

On the ATLANTIC COAST the fisheries of all provinces were more lucrative in March than in the same month of last year, except for Quebec where again no fishing was reported. In NOVA SCOTIA the total catch of groundfish during the first quarter was higher than in 1950. The most notable increase continues in the lobster fishery.

On the PACIFIC COAST both landings and landed values -- 9,219,000 lb. and \$270,000 -- were higher than in March, 1950. However, for the three month period the catch itself is much lower whilst the catch value is slightly higher.

STOCKS of all frozen fish in Canada on April 1 amounted to 25,295,000 lb., of which 23,230,000 lb. were frozen fresh and 2,065,000 lb. frozen smoked.

EXPORTS of fish and fish products during January and February totalled \$22,060,000 -- 38.4 p.c. higher than the figure for the same two months of 1950. Sales of salted and pickled fish were lower, but those of all other categories were higher, especially those of canned fish.

MILLION POUNDS

MILLION POUNDS

LANDINGS IN THE SEA FISHERIES OF CANADA

MILLION POUNDS

CONTINUED

MILLION POUNDS

BON RENDEMENT DE LA PECHE EN MARS (1)

La pêche a été bonne sur la côte de l'Est au cours de mars. Les mises à terre totales atteignaient 21 millions de livres, soit 2 millions de livres de plus qu'en mars 1950. L'aiglefin, le flétan et les autres poissons plats, le homard, la sardine et la perche de mer (rosefish) sont les principales espèces accusant une augmentation par rapport au même mois de l'année précédente.

Sur la côte du Pacifique, la pêche à cette période de l'année est au ralenti. La pêche au hareng s'est terminée le 17 du mois. Les prises totales pour cette espèce furent de 187,200 tonnes pour la saison d'hiver et d'automne, contre 183,000 en 1949-50.

La pêche d'hiver au Manitoba s'est prolongée jusqu'en mars alors que l'année précédente aucune capture importante n'avait été rapportée pour ce mois. En mars 1951, 1.2 millions de livres furent mises à terre, le corégone et le doré contribuant à près d'un million de livres.

Les inventaires de poisson de mer frais-congelé sont de 20.9 millions de livres au premier avril contre 16.5 millions à la même date de 1950. Le flétan, le hareng, le saumon et le filet de morue accusent une augmentation par rapport à l'année précédente. Les inventaires de filet d'aiglefin sont bas en raison principalement d'une production faible de ce produit à Terre-Neuve.

Les stocks de poisson d'eau douce frais-congelé au premier avril sont légèrement supérieurs à ceux de la même date en 1950. Il convient de signaler une augmentation appréciable dans les stocks de corégone. L'inventaire du poisson fumé-congelé se chiffre à 2.1 millions de livres comparativement à 1.6 millions en 1950. Les stocks de filet de morue fumé sont pratiquement le double de ce qu'ils étaient au premier avril 1950.

Pour les Maritimes et le Québec, les stocks de poisson salé bien que légèrement supérieurs à ceux de l'année précédente sont à niveau à peu près normal. Les stocks de poisson saumuré sont sensiblement plus bas que ceux de la fin de mars 1950. Il faut particulièrement signaler que le hareng fumé (bloaters) est pratiquement tout vendu et qu'il ne reste en entrepôt que trois mille boîtes, comparé à 36 mille à la fin de mars 1950. A Terre-Neuve, les stocks de morue salée, au 20 mars, s'élèvent à 31.3 millions de livres contre 44.3 millions à la même date de l'année précédente.

Les exportations des produits et sous-produits de la pêche durant les deux premiers mois de l'année courante ont été supérieures à celles de la même période de l'année précédente. La valeur totale s'élève à \$22.1 millions comparativement à \$15.9 millions en 1950. Toutes les catégories, excepté le poisson saumuré, ont enregistré une augmentation en quantité. En particulier, les exportations de poisson rond ou habillé frais ou congelé ont monté de 19.8 millions de livres à 26.8 millions; les exportations de filet frais ou congelé de 7.2 à 12.3 millions de livres, celles du poisson en conserve de 3.7 à 10.1 millions de livres et celles du poisson salé de 29.3 à 31.3 millions de livres. Les ventes de farine de poisson et d'huile ont également augmenté de \$1.9 millions à \$3.0 millions.

MONTHLY REVIEW OF CANADIAN FISHERIES STATISTICS APRIL 1951

In April landings in the sea-fisheries of CANADA (not including NEWFOUNDLAND) amounted to 62,374,000 pounds with a value to the fisherman of \$2,288,000. These figures are 100.5 and 7.3 p.c. higher respectively than those for April, 1950. Addition of the reported value of supplementary landings brings the grand total for the month up to \$2,309,000.

Total catch and catch values for the first four months of this year -- 269,192,000 lb. and \$8,901,000 -- are 6.5 and 13.8 p.c. higher than for the same period of 1950.

On the ATLANTIC COAST landings in all the provinces under review were much bigger, because of an earlier herring run, than in the same month of last year. Landed values, too, were higher except in Nova Scotia, where a decrease in lobster prices more than offset increases in other fisheries. The lowly herring was the centre of interest in April, 27.8 million pounds having been landed as compared with 1.9 million pounds in April, 1950.

On the PACIFIC COAST both landings and landed values -- 5,547,000 lb. and \$358,000 -- were higher than in April of last year.

STOCKS of all frozen fish in Canada on May 1st amounted to 25,497,000 lb., of which 22,712,000 lb. were frozen fresh and 2,785,000 lb. frozen smoked.

EXPORTS of fish and fish products during the first quarter totalled \$30,303,000 -- 29.2 p.c. higher than the amount for the like period of 1950. Sales of salted fish were lower, but those of all other classifications were higher.

MILLION POUNDS

MILLION POUNDS

LANDINGS IN THE SEA FISHERIES OF CANADA

MILLION POUNDS

CONTINUED

MILLION POUNDS

PECHE AU HARENG TRES FORTE EN AVRIL (1)

La pêche au hareng a été très bonne sur la côte de l'Est (à l'exclusion de Terre Neuve) au cours du mois d'avril. Les mises à terre totalisèrent 27.8 millions de livres comparative-ment à 1.9 millions pour le mois d'avril 1950. Cette forte augmentation est due au fait que le hareng a "donné" plus à bonne heure que l'an dernier. Toutes les provinces de la côte de l'Est accusent une forte augmentation dans les captures de cette espèce mais c'est dans le Québec où les débarquements sont les plus élevés et où l'augmentation est la plus forte. Quant au prix, il fut généralement le même que celui de l'an dernier soit environ \$1.00 du cent livres.

Les mises à terre totales pour la côte de l'Est atteignirent 56.8 millions de livres au cours du mois d'avril soit une augmentation de 30 millions de livres par rapport au mois correspondant de l'année précédente. Exception faite du hareng, dont l'augmentation est de 26 millions de livres, le haddock, le gaspereau et le homard sont les principales espèces dont les captures sont plus fortes que celles du mois d'avril 1950. La valeur au pêcheur, en dépit des captures importantes du hareng, est demeurée pratiquement la même, soit \$1.9 million. Ceci est dû au fait que le hareng est un poisson de bas prix et aussi au fait que le homard montre une diminution dans la valeur malgré un accroissement dans les captures.

Sur la côte du Pacifique, les débarquements s'élevèrent à 5.5 millions de livres soit une augmentation de 1.2 millions de livres par rapport au même mois de l'année précédente. Les prises plus élevées de la morue (gray cod) et des "clams" sont responsables de cette augmentation.

Nos pêcheries maritimes, durant les quatre premiers mois de l'année, ont donné un rendement supérieur à celui de la même période de 1950. Les captures totales atteignirent 269.2 millions de livres ayant une valeur au pêcheur de \$8.9 millions. C'est une augmentation de 6.5% en quantité et de 13.8% en valeur.

Les inventaires de poisson de mer frais-congelé au 1er mai sont supérieurs de 5.3 millions de livres à ceux de 1950; le flétan et le saumon de la côte de l'Ouest ainsi que le hareng, dont la production fut très forte, expliquent cette augmentation. Les stocks de poisson d'eau douce et ceux du poisson de mer fumé-congelé sont également plus élevés.

A Terre Neuve, les stocks de morue salée sont inférieurs à ceux de l'an passé, étant de 23.4 millions de livres contre 40.6 millions. Pour les Maritimes et le Québec, les stocks de poisson salé et saumuré sont légèrement plus bas que ceux de la même date en 1950. Les stocks de bloaters qui étaient de 25,847 boîtes au 1er mai de l'an dernier, ne sont que de 2,899 boîtes.

Les exportations des produits et sous-produits de la pêche, durant les trois premiers mois de l'année, s'élevèrent à \$30.3 millions contre \$24.4 millions durant la même période en 1950. Toutes les catégories de produits sauf le poisson salé, accusent une augmentation dans la valeur.

MONTHLY REVIEW
OF
CANADIAN FISHERIES STATISTICS
JUNE 1951

JUNE landings in the sea-fisheries of CANADA (not including Newfoundland) amounted to 116,524,000 pounds with a landed value of \$7,337,000. These figures are lower by 10.8 and 10.2 p.c. respectively than those for June, 1950. Inclusion of the reported value of supplementary landings brings the grand total for the month to \$7,527,000.

During the first six months of this year landings and landed values were 528,214,000 lb. and \$24,764,000 as compared with 531,583,000 lb. and \$24,272,000 for the same period of 1950.

On the ATLANTIC COAST returns to the fisherman were lower in both volume and value in New Brunswick and Nova Scotia, and in value in Prince Edward Island. Compared to June, 1950, the catch in Quebec was much greater, the mackerel, cod, salmon and lobster fisheries showing the biggest increases in value.

On the PACIFIC COAST landings of 15,007,000 lb. were valued at \$2,434,000. In June of last year the comparable figures were 18,727,000 lb. and \$3,197,000. The biggest decrease was recorded in the halibut fishery, but it must be remembered that the 'quotas' were filled much earlier this summer, and that the catch for the whole season was higher. However, the cumulative catch value was lower than in 1950. Of the salmons only sockeye was landed in greater quantity than in June, 1950.

STOCKS of all frozen fish in Canada on July 1st amounted to 37,992,000 lb., of which 34,014,000 lb. were frozen fresh and 3,078,000 lb. frozen smoked.

EXPORTS of fish and fish products continue at the same high level. During the first five months of this year they amounted to \$46,874,000 -- \$7,578,000 or 19.3 p.c. higher than for the same period of 1950.

Table 12 - Summary of Cold Storage Stocks of Frozen Fish at July 1, 1951 (1)
with comparative holdings for last year and last month

SECTION 1 - SEA FISH (Frozen Fresh)		July 1, 1950	JULY 1, 1951 <u>PRELIMINARY</u>	June 1, 1951 Revised
			- thousand pounds -	
Cod, Atlantic	Dressed	203	131	123
	Filletted	3,278	1,607	1,589
Cod, Pacific	Dressed	1,555	910	586
	Filletted	301	636	469
Haddock	Dressed	34	48	197
	Filletted	687	1,613	1,271
Rosefish	Filletted	345	364	440
Halibut, Atlantic	Dressed	478	802	728
Pacific	Dressed	10,277	11,259	10,883
Other Flatfish	Dressed	34	273	15
	Filletted	869	512	472
Herring, Atlantic	Round	10,316	4,597	6,785
Pacific	Round	1,642	1,536	2,056
Mackerel	Round or Dressed	1,867	1,858	758
Salmon, Atlantic	Dressed	474	255	16
Chum	Dressed	757	823	1,301
	Filletted	28	58	98
Coho	Dressed	209	487	667
	Filletted	51	63	13
Pink		165	20	7
Spring, Red	Dressed	470	550	281
	Filletted	5	-	-
Spring, White		327	131	61
Steelhead		5	12	8
Not Classified		35	85	73
TOTAL SALMON		2,526	2,484	2,525
Shellfish (Lobsters, Clams, Oysters)		300	284	271
Other Sea Fish Dressed and Filletted		2,156	2,185	1,697
TOTAL - SEA FISH (Frozen Fresh)		36,866	(2) 31,849	30,865
SECTION 2 - INLAND FISH (Frozen Fresh)				
Blue Pickerel	Round or Dressed	28	-	-
Pickerel (Yellow Pike)	Round or Dressed	24	28	19
	Filletted	159	154	47
Cisco (Lake Herring)	Round or Dressed	89	52	25
Lake Trout	Round or Dressed	166	62	71
	Filletted	2	1	1
Perch	Round or Dressed	8	6	2
Pike (Jackfish)	Round or Dressed	216	142	48
Sauger	Round or Dressed	12	13	-
Suckers	Round or Dressed	15	71	54
Tullibee	Round or Dressed	304	387	403
Whitefish	Dressed and Filletted	546	1,499	731
Other Inland Fish	All Forms	405	650	423
TOTAL - INLAND FISH (Frozen Fresh)		1,974	3,065	1,824
SECTION 3 - SEA AND INLAND FISH (Frozen Smoked)				
Cod, Atlantic	Filletted	1,924	2,079	2,230
Pacific	Dressed	28	37	14
	Filletted	92	91	101
Haddock	Dressed	159	279	280
	Filletted	56	72	104
Salmon	Filletted	34	75	15
Sea Herring	Dressed	385	286	226
Goldeye	Dressed	32	16	3
Other		53	53	50
TOTAL - SEA AND INLAND FISH (Frozen Smoked)		2,763	(3) 3,078	3,023
GRAND TOTAL - ALL FORMS FRESH & SMOKED FROZEN		41,605	37,992	35,712

(1) Summarized from the D.B.S. monthly, "Cold Storage Holdings of Fish." (2) Includes estimates of 750,000 lb. (3) Includes estimates of 90,000 lb.

Table 13 - Summary of Stocks of Salted Fish
with comparative holdings for last month and last year

Kind	June 30, 1950	JUNE 30, 1951	May 31, 1951
- thousand pounds -			
<u>WET-SALTED FISH</u> (pickled or kench-cured)

MILLION POUNDS

LANDINGS IN THE SEA FISHERIES OF CANADA

MILLION POUNDS

CONTINUED

MILLION POUNDS

RENDEMENT INFÉRIEUR DE LA PÊCHE EN JUIN (1)

Le rendement des pêcheries maritimes canadiennes (à l'exclusion de Terre-Neuve) durant le mois de juin fut de 116.5 millions de livres évalué à \$7.3 million en comparaison de 130.7 millions de livres ayant une valeur au pêcheur de \$8.2 million en juin de l'année précédente. La diminution est de 10.8 pour cent dans la quantité et de 10.2 pour cent dans la valeur.

Sur la côte de l'Atlantique, les débarquements en juin furent inférieurs de 9.3 pour cent à ceux du même mois de l'année dernière - 101.5 contre 111.9 millions de livres. La valeur au pêcheur baissa de \$5.0 million à \$4.9 million. Cette diminution dans les captures s'explique principalement par le faible rendement de la pêche à la sardine au Nouveau-Brunswick qui n'a donné que 1.2 millions de livres contre 12.4 millions de livres en juin 1950. Les captures de hareng, de gaspateau et de homard ont aussi été inférieures à celles du mois de juin mais les captures de morue, du haddock et du maquereau ont été supérieures. Toutefois, on note une augmentation dans les mises à terre et la valeur au pêcheur pour les six premiers mois de l'année. En effet à la fin de juin, les captures totales atteignirent 337.5 millions de livres comparativement à 319.3 million à la même date en 1950; la valeur au pêcheur fut de \$16.6 million contre \$16.3 million l'année précédente. Les principales espèces qui causèrent cette augmentation dans les captures furent la morue, le haddock, le hareng, le maquereau, le gaspateau et le homard.

Les mises à terre en juin, sur la côte du Pacifique, ne furent que de 15 millions de livres en comparaison de 18.7 million de livres en juin 1950. La valeur au pêcheur qui atteignait \$3.2 million en juin de l'année précédente, baissa à \$2.4 million. On note une diminution sensible dans les captures du flétan. Durant les six premiers mois de l'année il s'est débarqué sur la côte du Pacifique, 190.7 millions de livres de poisson et de crustacés, contre 212.3 millions de livres durant la même période de 1950. Toutefois, la valeur au pêcheur fut supérieure cette année - \$8.2 contre \$8.0 million. Les captures de flétan furent supérieures de 2 millions de livres mais celles du hareng diminuèrent de 26 millions de livres.

Les stocks de poisson de mer frais-congelé au 1er juillet 1951 n'étaient que de 31.8 millions de livres en comparaison de 36.9 millions de livres à la même date en 1950. Les inventaires de filet de morue étaient inférieures de plus de 50 pour cent soit 1.6 millions de livres contre 3.3 million au 1er juillet 1950. Les stocks de hareng de l'Atlantique qui atteignaient 10.3 millions de livres l'an passé n'étaient que de 4.6 millions de livres cette année. Par contre, on note une augmentation dans les stocks du flétan du Pacifique, en raison des captures plus fortes de cette espèce, cette année.

Les stocks de poisson d'eau douce frais-congelé, à la fin de juin étaient plus élevés que ceux de l'an dernier à la même date - 3.1 et 2.0 millions de livres. L'accroissement dans les stocks de corégone est principalement responsable de cette augmentation. Les stocks du poisson fumé-congelé étaient légèrement supérieurs à ceux de l'année précédente.

Dans les Maritimes et le Québec, les stocks de poisson salé à la fin de juin étaient inférieurs à ceux de l'an passé. Dans la catégorie vert-salé, les inventaires n'étaient que de 8.2 millions de livres en comparaison de 11.5 million à la fin de juin 1950. On note cependant une augmentation dans les catégories de poisson salé-séché et de poisson désossé. Il convient de signaler une diminution sensible dans les stocks de poisson saumuré. Toutefois, les stocks de bloaters à la fin de juin étaient plus élevés que ceux de l'an dernier: 328,844 boîtes contre 230,091 boîtes. A Terre-Neuve, les inventaires de morue salée et séchée se maintiennent à un bas niveau: ils n'étaient à la fin de juin que de 11.2 millions de livres comparativement à 30.1 millions de livres à la fin de juin 1950.

MONTHLY REVIEW OF CANADIAN FISHERIES STATISTICS

JULY 1951

In July the sea-fisheries of CANADA (not including NEWFOUNDLAND) yielded 122,746,000 pounds of fish valued at \$10,978,000 -- a catch 15.2 p.c. lower in volume, but 26.3 p.c. higher in value than that taken in July, 1950. Inclusion of the reported value of supplementary landings brings the grand total for the month to \$11,111,589.

PACIFIC COAST landings of 39,074,000 lb., and landed values, \$7,809,000, were 15.8 and 41.8 p.c. higher respectively than the totals for the same month of last year. The main contributing factor to these big increases was sockeye salmon -- 19,207,000 lb. and \$5,162,000 as compared with 17,096,000 lb. and \$3,368,000 in July, 1950.

The ATLANTIC COAST catch -- 83,672,000 lb. valued at \$3,169,000 -- was lower by 24.6 p.c. in volume, but by only 0.6 p.c. in value. The main reason for this is to be found in the New Brunswick sardine fishery, where a huge decrease in landings was offset by the low price paid for this species.

STOCKS of all frozen fish in CANADA on August 1st amounted to 43,363,000 lb., of which 39,893,000 lb. were frozen fresh and 3,470,000 lb. frozen smoked.

EXPORTS of fish and fish products continue at the same high level. During the first six months of this year they totalled \$56,173,000 -- \$7,091,000 or 14.4 p.c. higher than in the same period of 1950.

LANDINGS IN THE SEA FISHERIES OF CANADA

MILLION POUNDS

CONTINUED

MILLION POUNDS

Au cours du mois de juillet, les prises de poisson de mer au Canada (Terre-Neuve non compris), ont atteint 122,746,000 livres, ayant une valeur au pêcheur de \$10,978,000; en comparaison avec le même mois de 1950, cela représente une diminution de 15.2 p.c. en quantité, et une augmentation de 26.3 p.c. en valeur. Si l'on ajoute la valeur rapportée des prises supplémentaires, le grand total se chiffre à \$11,111,589.

Sur la côte du Pacifique, les débarquements de 39,074,000 livres, et la valeur au débarquement de \$7,809,000, furent plus élevés par 15.8 et 41.8 pourcent, respectivement, que les montants du même mois de l'an dernier. Le facteur le plus important qui a contribué à ces hausses fut le saumon sockeye -- 19,207,000 livres et \$5,162,000, en comparaison avec 17,096,000 livres et \$3,368,000 en juillet 1950.

Les prises de la côte de l'Atlantique, 83,672,000 livres ayant une valeur de \$3,169,000, ont été plus basses de 24.6 p.c. en quantité, mais de 0.6 p.c. seulement en valeur. L'explication se trouve dans la pêche aux sardines au Nouveau-Brunswick, où il y eut une diminution énorme en quantité débarquée, la valeur de cette espèce étant cependant très basse.

Les stocks de poisson congelé se chiffrent, au premier août, à 43,363,000 livres, dont 39,893,000 livres frais congelé et 3,470,000 fumé congelé.

Les explications de poisson et de produits de poisson continuent au même haut niveau. Au cours des six premiers mois de l'année courante, la valeur en est de \$56,173,000, une augmentation de \$7,091,000 ou de 14.4 p.c. par rapport à la même période de 1950.

Préparé dans la section de pêcheries,

MONTHLY REVIEW
OF
CANADIAN FISHERIES STATISTICS
AUGUST 1951

24-002

August landings in the sea-fisheries of CANADA (not including NEWFOUNDLAND) amounted to 170,425,000 pounds with an initial value of \$14,067,000. The catch was 8.6 p.c. lower in volume, but 28.9 p.c. higher in value than that taken in August, 1950. Inclusion of the reported value of supplementary landings brings the grand total for the month to \$14,172,818.

During the eight-month period to the end of August landings and landed values -- with last year's comparable figures in parentheses -- were 821,706,000 lb. (862,833,000 lb.) and \$49,929,000 (\$43,880,000).

The ATLANTIC COAST catch -- 86,306,000 lb. valued at \$3,538,000 -- was 27.4 and 3.7 p.c. lower in volume and value respectively than that of August, 1950. Landings of groundfish, herring and sardines continue on a lower level. Lobsters have been caught in approximately the same quantity this season, but the cumulative value is down by 6.4 p.c. as compared with last year.

The PACIFIC COAST catch -- 84,119,000 lb. valued at \$10,529,000 -- was 24.6 and 45.4 p.c. higher respectively than in August, 1950. The most noticeable increases, those in the sockeye, coho and pink salmon fisheries, are cyclical in character.

STOCKS of all frozen fish in CANADA (including NEWFOUNDLAND) on September 1st amounted to 48,806,000 lb., of which 45,083,000 lb. were frozen fresh and 3,723,000 lb. frozen smoked.

EXPORTS of fish and fish products are on the same high level as noted in previous reviews. During the first seven months of this year they totalled \$66.6 million as against \$59.9 million in the same period of 1950.

Prepared in the Fisheries Section
of the Industry and Merchandising Division.

LANDINGS IN THE SEA FISHERIES OF CANADA

MILLION POUNDS

CONTINUED

MILLION POUNDS

En août, les débarquements de poisson de mer au Canada (non compris Terre-Neuve) atteignent 170,425,000 livres d'une valeur aux pêcheurs de \$14,067,000. C'est là une diminution de 8.6 p. 100 en volume mais une augmentation de 28.9 p. 100 en valeur comparativement à août 1950. La valeur déclarée des débarquements supplémentaires porte le total général pour le mois à \$14,172,818.

Au cours des huit mois terminés en août, les débarquements et la valeur au débarquement, avec les chiffres de l'an dernier entre parenthèses, s'établissent respectivement à 821,706,000 livres (862,833,000) et \$49,929,000 (\$43,880,000).

La prise sur la côte de l'ATLANTIQUE, 86,306,000 livres d'une valeur de \$3,538,000, est respectivement de 27.4 et 3.7 p. 100 inférieure en volume et en valeur à celle d'août 1950. La prise de poissons de fond, de harengs et de sardines, a été moins considérable. Celle de homard a été à peu près la même au cours de la saison, mais la valeur cumulative accuse une baisse de 6.4 p. 100 sur l'an dernier.

La prise sur la côte du PACIFIQUE, 84,119,000 livres d'une valeur de \$10,529,000, est respectivement de 24.6 et 45.4 p. 100 supérieure à celle d'août 1950. L'augmentation la plus remarquable, soit celle du saumon sockeye, argenté et bossu, est de caractère cyclique.

Les STOCKS de tout poisson congelé au CANADA (y compris Terre-Neuve) le 1er septembre atteignent 48,806,000 livres, dont 45,083,000 livres frais congelé et 3,723,000 livres fumé congelé.

Les exportations de poisson et de produits de poisson se maintiennent au même niveau élevé. Au cours des sept premiers mois de cette année, elles atteignent \$66,600,000 au regard de \$59,900,000 pour la même période de 1950.

MONTHLY REVIEW
OF
CANADIAN FISHERIES STATISTICS
SEPTEMBER 1951

In September landings and landed values in the sea-fisheries of CANADA (NEWFOUNDLAND not yet included) amounted to 113,957,000 lb. and \$8,629,000. The catch was 11.2 p.c. lower in volume, but 15.6 p.c. higher in value than that of September, 1950. Inclusion of the reported value of supplementary landings brings the grand total for the month to \$8,745,891.

During the nine-month period to the end of September landings and landed values -- with last year's comparable figures in parentheses -- were 934,628,000 lb. (991,114,000 lb.) and \$58,548,000 (\$51,894,000).

The PACIFIC COAST catch -- 46,216,000 lb. valued at \$5,973,000 -- was 2.2 and 15.6 p.c. higher respectively than in the same month of last year. Again it must be emphasized that the big increases in certain salmon fisheries are cyclical.

The ATLANTIC COAST catch -- 67,741,000 lb. valued at \$2,656,000 -- was 18.4 and 6.6 p.c. lower respectively than that taken in September of last year.

For the nine-month period to the end of September the totals -- with the comparable 1950 amounts in brackets -- were 575,212,000 lb. (632,351,000 lb.) and \$26,038,000 (\$25,990,000). There was, therefore, a decrease of 9.0 p.c. in volume and an increase of 0.2 p.c. in value. These percentage changes may also be applied to the cod fishery. The halibut catch was appreciably lower this year, but that of plaice more than doubled. Herring and sardine landings were lower this year, but the overall value to the fisherman was higher. Landings of lobsters in the period were approximately the same as in 1950, but the landed value was 6.1 p.c. lower.

STOCKS of all frozen fish in CANADA (including NEWFOUNDLAND) amounted to 51,065,000 lb. on October 1st, 1951, of which 47,928,000 lb. were frozen fresh and 3,137,000 lb. frozen smoked.

EXPORTS of fish and fish products continue on the same high level. During the first eight months of the year they totalled \$75.8 million as compared with \$69.8 million in the same period of 1950.

LANDINGS IN THE SEA FISHERIES OF CANADA

MILLION POUNDS

CONTINUED

MILLION POUNDS

En septembre, les débarquements et la valeur au débarquement du poisson de mer au Canada (Terre-Neuve non encore comprise) s'établissent respectivement à 113,957,000 livres et \$8,629,000. C'est là une diminution de 11.2 p. 100 en volume et de 15.6 p. 100 en valeur au regard de septembre 1950. La valeur déclarée des débarquements supplémentaires porte le total général du mois à \$8,745,891.

Au cours des neuf mois terminés en septembre, les débarquements et la valeur au débarquement, avec les chiffres de l'an dernier entre parenthèses, atteignent respectivement 934,628,000 livres (991,114,000) et \$58,548,000 (51,894,000).

La prise sur la côte du PACIFIQUE, 46,216,000 livres d'une valeur de \$5,973,000, est respectivement de 2.2 et 15.6 p. 100 supérieure à celle de septembre 1950. De nouveau, il faut remarquer que les fortes augmentations dans certaines pêcheries de saumon sont de caractère cyclique.

La prise sur la côte de l'ATLANTIQUE, 67,741,000 livres d'une valeur de \$2,656,000 est respectivement de 18.4 et 6.6 p. 100 inférieure à celle de septembre l'an dernier.

Les totaux des neuf mois terminés en septembre, avec les chiffres de 1950 entre parenthèses, sont de 575,212,000 livres (632,351,000) et \$26,038,000 (\$25,990,000).

Il y a donc diminution de 9.0 p. 100 en volume mais augmentation de 0.2 p. 100 en valeur. Ces changements proportionnels s'appliquent aussi aux prises de morue. La prise de flétan est beaucoup moins considérable cette année, mais celle de plie est de plus du double. Les débarquements de hareng et de sardine sont inférieurs cette année, mais la valeur d'ensemble pour les pêcheurs est plus élevée. Les débarquements de homard pour la période sont à peu près les mêmes qu'en 1950, mais la valeur au débarquement est de 6.1 p. 100 inférieure.

Les STOCKS de tout poisson congelé au CANADA (y compris Terre-Neuve) le 1^{er} octobre atteignent 51,065,000 livres, dont 47,928,000 livres frais congelé et 3,137,000 livres fumé congelé.

Les EXPORTATIONS de poisson et de produits de poisson se maintiennent au même niveau élevé. Au cours des huit premiers mois de cette année, elles s'élèvent à \$75,800,000 au regard de \$69,800,000 pour la même période de 1950.

MONTHLY REVIEW
OF
CANADIAN FISHERIES STATISTICS
OCTOBER 1951

In October the sea-fisheries of CANADA (NEWFOUNDLAND not included) yielded a catch of 79,956,000 lb. with a landed value of \$5,007,000. These figures are higher by 5.3 p.c. in volume, but lower by 23.1 p.c. in value than those for October, 1950. Inclusion of the reported value of supplementary landings brings the grand total for the month up to \$5,061,600.

During the ten-month period to the end of October landings and landed values -- with last year's comparable figures in parentheses -- were 1,014,583,000 lb. (1,067,020,000 lb.) and \$63,559,000 (\$58,402,000).

The ATLANTIC COAST catch -- 53,082,000 lb. worth \$1,826,000 -- was 35.2 and 0.7 p.c. higher respectively than in the same month of last year. These increases may be attributed to bigger landings of sardines in New Brunswick and of herring in Nova Scotia in October. For the ten-month period under review, the Atlantic Coast catch was 6.4 p.c. lower in volume but 0.2 p.c. higher in value than in the like period of 1950.

THE PACIFIC COAST catch -- 26,874,000 lb. valued at \$3,181,000 -- was 26.7 and 32.2 p.c. lower respectively than in October of last year. In the ten-month period to the end of October the salmons in general showed substantial increases, with pinks, sockeye and coho leading the way. The catch of chums was smaller than in 1950, yet was higher than usual for an 'off-year'.

STOCKS of all frozen fish in CANADA (NEWFOUNDLAND included) amounted to 57,540,000 lb. on November 1st, of which 54,689,000 lb. were frozen fresh and 2,851,000 lb. frozen smoked. There was an "into-storage" movement for all classifications of 6.5 million pounds as compared with a similar movement of 3.2 million pounds during November, 1950.

EXPORTS of fish and fish products continue on the same high level as noted throughout the year. In the nine months to the end of September their total value was \$86.6 million as compared with \$83.2 million in the same period of 1950. Decreases in the exports of salted fish and shellfish were more than counterbalanced by increases in foreign sales of all other groups.

Prepared in the Fisheries Section
of the Industry and Merchandising Division.

LANDINGS IN THE SEA FISHERIES OF CANADA

MILLION POUNDS

MILLION POUNDS

LANDINGS IN THE SEA FISHERIES OF CANADA

MILLION POUNDS

CONTINUED

MILLION POUNDS

En octobre, la pêche maritime du CANADA (non compris TERRE-NEUVE) rapporte 79,956,000 livres, d'une valeur au débarquement de \$5,007,000. C'est là une augmentation en volume de 5.3 p. 100 mais une diminution en valeur de 23.1 p. 100 comparativement à octobre 1950. La valeur déclarée des débarquements supplémentaires porte le total général du mois à \$5,061,600.

Au cours des dix mois terminés en octobre, les débarquements et la valeur au débarquement, avec les chiffres de l'an dernier entre parenthèses, atteignent respectivement 1,014,583,000 livres (1,067,020,000) et \$63,559,000 (\$58,402,000).

La prise sur la côte de l'ATLANTIQUE, 53,082,000 livres d'une valeur de \$1,826,000, est respectivement de 35.2 et 0.7 p. 100 supérieure à celle d'octobre l'an dernier. Ces augmentations peuvent être attribuées à de plus forts débarquements de sardines au Nouveau-Brunswick et de hareng en Nouvelle-Ecosse. Pour les dix mois à l'étude, la prise sur la côte de l'Atlantique est de 6.4 p. 100 inférieure en volume à celle de la même période de 1950, mais de 0.2 p. 100 supérieure en valeur.

La prise sur la côte du PACIFIQUE, 26,874,000 livres d'une valeur de \$3,181,000, est respectivement de 26.7 et 32.2 p. 100 inférieure à celle d'octobre l'an dernier. Au cours de la période de dix mois terminée en octobre, le saumon accuse de façon générale une augmentation marquée, les variétés de pinks, sockeye et cocho venant en tête. La prise de chums est plus faible que celle de 1950, mais elle est plus élevée que d'habitude pour une année censée être mauvaise.

Les STOCKS de tout poisson congelé au CANADA le 1er novembre(y compris TERRE-NEUVE) atteignent 57,540,000 livres, dont 54,689,000 livres de poisson frais et 2,851,000 livres de poisson fumé. Pour toutes les variétés de poisson, il y a eu un mouvement d'entrée dans les entrepôts de 6,500,000 livres au regard d'un mouvement semblable de 3,200,000 livres en novembre 1950.

Les EXPORTATIONS de poisson et de produits du poisson se maintiennent au même niveau élevé qu'au cours des autres mois au cours de l'année. Pour les neuf mois terminés en septembre, elles s'élèvent à \$86,600,000, comparativement à \$83,200,000 en 1950. La diminution des exportations de poisson salé et de crustacés est plus que contre-balancée par une augmentation des ventes à l'étranger de toutes les autres variétés.

MONTHLY REVIEW
OF
CANADIAN FISHERIES STATISTICS
NOVEMBER 1951

In NOVEMBER landings in the sea-fisheries of CANADA (NEWFOUNDLAND not included) amounted to 106,663,000 lb. with a landed value of \$3,730,000. These figures are lower by 30.3 and 23.7 p.c. respectively than those for November, 1950. Inclusion of the reported value of supplementary landings brings the grand total for the month up to \$3,811,789.

During the first eleven months of the year landings and landed values -- with last year's comparable figures in parentheses -- were 1,121,246,000 lb. (1,220,050,000 lb.) and \$67,289,000 (\$63,274,000).

The PACIFIC COAST catch -- 68,087,000 lb. valued initially at \$2,211,000 -- was 44.2 and 35.4 p.c. lower respectively than that taken in November, 1950. These decreases were mainly occasioned by a sharp reduction in the landings of herring, heavy weather having retarded the start of the winter fishery. The catch of salmon was down as compared with the same month of last year, but the year's catch to-date -- 28,991,000 lb. -- is one of the highest on record, and indeed the most valuable.

The ATLANTIC COAST catch -- 38,576,000 lb. valued at \$1,519,000 -- was 24.0 and 3.6 p.c. higher respectively than in November, 1950. Landings of sardines in New Brunswick were much bigger than in the same month of last year, as was the catch of plaice in Nova Scotia.

STOCKS of all frozen fish in CANADA (including NEWFOUNDLAND) on December 1st amounted to 50,200,000 lb., of which 47,986,000 lb. were frozen fresh and 2,214,000 lb. frozen smoked. There was an "out-of-storage" movement for all classifications of 7.2 million pounds as compared with a similar movement of 6.4 million pounds during November, 1950.

EXPORTS of fish and fish products continue on the same high level. Their total value for the first ten months of the year was \$100.2 million as against \$94.7 million in the same period of 1950. Exports of fresh and frozen whole or dressed fish, of salted fish and of shellfish were lower, but these declines were more than offset by increases in the sales of all other classifications.

LANDINGS IN THE SEA FISHERIES OF CANADA

MILLION POUNDS

CONTINUED

MILLION POUNDS

Au Canada, sans Terre-Neuve, les débarquements de poisson de mer s'élèvent à 106,666,000 livres d'une valeur de \$3,730,000 en novembre 1951, soit une diminution de 30.3 p. 100 et de 23.7 p. 100, respectivement, au regard de novembre 1950. Y compris la valeur déclarée des débarquements supplémentaires, le total général du mois passe à \$3,811,789.

Au cours des onze premiers mois de l'année, les débarquements s'établissent à 1,121,246,000 livres d'une valeur de \$67,289,000, en comparaison de 1,220,050,000 livres d'une valeur de \$63,274,000 durant la même période de 1950.

Sur la COTE DU PACIFIQUE, la prise totalise 68,087,000 livres évaluées initialement à \$2,211,000, soit une diminution de 42.6 p. 100 de la quantité et de 33.3 p. 100 de la valeur au regard de novembre 1950. Ces diminutions découlent surtout de la vive baisse des débarquements de hareng, le temps défavorable ayant retardé le début de la pêche d'hiver. La prise de saumon diminue en comparaison de celle du même mois de 1950, mais la pêche cumulative des onze premiers mois de l'année atteint un sommet de 28,991,000 livres; la valeur atteint également un niveau sans précédent.

Sur la COTE DE L'ATLANTIQUE, la prise (38,576,000 livres d'une valeur de \$1,159,000) augmente de 24.0 p. 100 quant au volume et de 3.6 p. 100 quant à la valeur comparativement à novembre 1950. Les débarquements de sardines au Nouveau-Brunswick et de carrelet en Nouvelle-Ecosse augmentent vivement au regard du même mois de 1950.

Au Canada, sans Terre-Neuve, les STOCKS de poisson gelé s'élèvent à 50,200,000 livres le 1^{er} décembre, soit 47,986,000 livres de poisson gelé frais et 2,214,000 livres de poisson gelé fumé. Les stocks sortis des entrepôts totalisent 7,200,000 livres, contre 6,400,000 livres en novembre 1950.

Les EXPORTATIONS de poisson et de produits du poisson se maintiennent à un niveau élevé. La valeur totale pour les dix premiers mois de l'année est de \$100,200,000, en comparaison de \$94,700,000 pour la même période de 1950. Les exportations de poisson frais et gelé entier ou vidé, de poisson salé et de crustacés diminuent, mais les diminutions sont plus que compensées par les augmentations des autres catégories.

MONTHLY REVIEW
OF
CANADIAN FISHERIES STATISTICS
DECEMBER 1951

DECEMBER landings in the sea-fisheries of CANADA (NEWFOUNDLAND excluded) amounted to 170,487,000 lb. with a landed value of \$5,374,000. These figures are higher by 47.4 and 20.2 p.c. respectively than those for December, 1950. Inclusion of the reported value of supplementary landings makes the grand total \$5,397,721.

For the year 1951 landings and landed values -- with the 1950 figures in parentheses -- were reported as being 1,291,733,000 lb. (1,335,696,000 lb.) and \$72,660,000 (\$67,730,000), a decrease of 3.3 p.c. in volume, but an increase of 7.3 p.c. in value. It must be remembered, however, that these statistics are preliminary and are therefore subject to revision.

The PACIFIC COAST catch -- 141,381,000 lb. worth \$2,312,000 to the fisherman -- was higher by 53.5 and 70.0 p.c. respectively than that taken in December, 1950. For the whole year landings -- 595,758,000 -- were lower by 2.2 p.c., but landed values -- \$40,214,000 -- were 13.6 p.c. higher. In 1951 salmon was indeed 'king of the B.C. fisheries'. Although the pack was not the biggest on record its market value has never been equalled. And this in an 'off-cycle' year!

The ATLANTIC COAST catch -- 29,106,000 lb. valued initially at \$3,062,000 -- was 23.6 p.c. bigger, but 1.6 p.c. less valuable than that of December, 1950. Landings for the year -- 695,975,000 lb. -- were 4.2 p.c. lower, while the landed values -- \$32,446,000 -- were a mere 0.4 p.c. higher. Returns to the fisherman were higher this year in New Brunswick because of a more remunerative sardine fishery. In the other Atlantic Provinces aggregate catch values were slightly lower. This statement may also be made of the lobster fishery in all four provinces.

STOCKS of all frozen fish in CANADA (including NEWFOUNDLAND) on January 1st, 1952, amounted to 44,075,000 lb., of which 42,119,000 lb. were frozen fresh and 1,956,000 lb. frozen smoked. There was an 'out-of-storage' movement for all classifications of 6.6 million pounds as compared with a similar movement of 7.7 million pounds during December, 1950.

Prepared in the Fisheries Section
of the Industry and Merchandising Division.

MILLION POUNDS

MILLION POUNDS

LANDINGS IN THE SEA FISHERIES OF CANADA

MILLION POUNDS

CONTINUED

MILLION POUNDS

En décembre, les débarquements de poisson de mer au Canada (non compris Terre-Neuve) se chiffrent par 170,487,000 livres d'une valeur au débarquement de \$5,734,000, augmentations respectives de 47.4 et 20.2 p. 100 sur décembre 1950. La valeur déclarée des débarquements supplémentaires porte le total général à \$5,397,721.

La quantité et la valeur des débarquements au cours de 1951, avec les chiffres de 1950 entre parenthèses, s'établissent à 1,291,733,000 livres (1,335,696,000) et \$72,660,000 (\$67,730,000), soit une diminution de 3.3 p. 100 en volume mais une augmentation de 7.3 p. 100 en valeur. Cependant, il est à remarquer que ces statistiques sont provisoires et sujettes à révision.

Sur la côte du Pacifique, la prise atteint 141,381,000 livres d'une valeur au pêcheur de \$2,312,000, augmentations respectives de 53.5 et 70.0 p. 100 sur décembre 1950. Les débarquements de toute l'année accusent une baisse de 2.2 p. 100, tandis que leur valeur est de 13.6 p. 100 supérieure. En 1951, le saumon est sans aucun doute le "roi des pêcheries de la Colombie-Britannique". Même si la mise en boîte de cette variété n'atteint pas un nouveau sommet, la valeur des ventes est sans précédent.

Sur la côte de l'Atlantique, la prise s'élève à 29,106,000 livres évaluées à \$3,062,000, augmentation de 23.6 p. 100 en volume mais diminution de 1.6 p. 100 en valeur sur décembre 1950. Les débarquements de l'année, 695,975,000 livres, sont de 4.2 p. 100 inférieurs, tandis que leur valeur, \$32,446,000, représente une légère augmentation de 0.4 p. 100. Les pêcheurs du Nouveau-Brunswick reçoivent plus d'argent cette année, par suite d'une pêche à la sardine plus lucrative. Dans les autres provinces de l'Atlantique, la valeur globale des prises est légèrement plus faible. C'est aussi le cas de la pêche au homard dans les quatre provinces.

Les stocks de tout poisson congelé au Canada (y compris Terre-Neuve) le 1er janvier 1952 atteignent 44,075,000 livres, dont 42,119,000 livres frais congelé et 1,956,000 livres fumé congelé. Les stocks de toutes les variétés sortis des entrepôts sont de 6,600,000 livres, au regard de 7,700,000 livres en décembre 1950.

Préparé par la Section des pêcheries,
Division de l'industrie et du commerce.
